RESEARCH EXPERIENCE

- 1993-1996 AntiVirals Inc., Corvallis, Oregon, *Gene targeted therapeutics for HIV, HSV, and Hepatitis using antisense technology.*
Extensive wet chemistry experience in the theory, planning, and execution of organic reactions, including methods, process development, and reaction optimization. Monitoring of reactions using HPLC, TLC, and UV-VIS spectrophotometry; purification using normal and reverse phase chromatography, recrystallization, and prep-TLC; characterization of compounds by Mass Spectrometry and NMR.
- 1996 TCI America, Portland, Oregon, *Unique synthetic organic syntheses.* Performance of organic literature syntheses and of scaling syntheses from 1 milliliter to 40 liters. Use of TLC in reaction analysis; use of flash chromatography, recrystallization, and distillation methods in product synthesis and purification; characterization of compounds by Mass Spectrometry, FTIR, UV-VIS Spectrophotometry, and NMR. Technical writing, documentation, and protocol generation experience.
- 5/2003-6/2006 Transplantation Research Laboratory, Oregon Health & Science University, Portland, OR, *CMV Accelerated Vascular Disease. In vivo* studies using microsurgical techniques in rats to establish CMV-accelerated transplant vascular sclerosis in an orthotopic kidney transplant model, and CMV-accelerated carotid artery restenosis in a carotid artery injury model. Study of the mechanisms responsible for the virus-associated acceleration of vascular disease, with a focus on host and viral factors, including chemokine and chemokine receptor expression, and gene expression by microarray analysis.
- Clinical studies including the study of VRE infection in liver transplant recipients, the effect of Hepatitis C on outcomes following liver retransplantation, the effect of Hepatitis C on the incidence of post-transplant diabetes mellitus, Renal failure following liver transplantation.
