Babies Needed for Research Study

Age: Between Birth and Three Months

Purpose: Determine if measurement of infant sucking can guide early care for babies. We are testing a device called an orometer that measures infant sucking patterns. For the testing you can use formula or breast milk in our modified bottle to feed your baby.

How Test is Done: In the CDRC clinic, we will ask you a few questions about your baby's health. You will feed your baby from our bottle with the orometer attached. Your baby will be able to rest and burp as needed. The test takes about 20-30 minutes.

Compensation: We will pay you $40.00 for the test

If Interested: Call (503) 418-3498 and we will schedule an appointment or be happy to answer any questions.
