

OHSU Tobacco Free Initiative Process Hospital Quick Reference for Nurses

- RN completes tobacco assessment questions, documents on admission database.
- If patient has smoked within the past 12 months, RN provides Smoking Cessation Guide and documents education on Education Record. (<http://ozone.ohsu.edu/healthsystem.nursing>)
- If tobacco use \leq 90 days, RN places the Tobacco Dependence Inpatient Orders in front of green chart for physician (RN assures MD initiates orders by paging MD when order set placed in chart). (<http://ozone.ohsu.edu/healthsystem/HIS/po7290.pdf>)
- When Order Set received, HUC contacts Mary Gibson, NP at 60027. HUC leaves message with patient name, medical record number, location.
- Mary Gibson, NP will review admission database, complete the “Tobacco Treatment Specialist Recommendations for Inpatient Treatment and Discharge Care” preprinted progress note (HP5336) (medication recommendations and follow-up referrals for discharge), add to chart, and update progress notes (in green chart). Mary will notify medical team that the consult has been completed and whether additional orders are needed.
- Physician dictates discharge plan from progress note, writes discharge medications and recommended follow-up on outpatient scripts and hospital discharge paperwork.
