

A plan for the future.

Friends,

Recently, OHSU researcher Shoukhrat Mitalipov became the first in the world to successfully clone primate stem cells. His stunning breakthrough – along with breakthroughs by other scientists across the globe – will help cure and perhaps prevent disease.

Dr. Joe Robertson
President, OHSU

Creating knowledge and helping people live healthier lives is what OHSU is all about. That's what brings talented teachers, healers, scientists and engineers to our university and health center. We all share a picture of where we want to be by the year 2020 – partnering with others to make Oregon a national leader in health and science innovation.

It's a big vision and we know that the expectations that Oregonians have for OHSU will always be greater than our budget will allow. That is the nature of a public service organization. So we can continue to invest in healing, teaching, discovery and outreach, we have pledged to make ourselves even more efficient and effective. We have committed ourselves to achieve significant cost savings and performance improvements in the years ahead, while seeking new partnerships and support. These are the right moves for the future.

Visit our website at www.ohsu.edu/vision2020 to read our plan. Let me know what you think. You can email me at shareit@ohsu.edu.

Thank you for your continued support for the important work that OHSU accomplishes throughout our state. As a public institution that serves all Oregonians, the health and well-being of Oregonians will always be our true bottom line.

A handwritten signature in black ink that reads "Joe E. Robertson". The signature is written in a cursive, flowing style.

Joe E. Robertson, M.D., M.B.A.
President, Oregon Health & Science University
