“As an endocrinologist trained at OHSU, with a specific interest in managing type 1 diabetes, I have gained a fair amount of experience in diabetes technology. Also, I have always had a specific interest in mathematics and engineering since I was young, and this has also helped to fuel my interest in biomedical engineering. Therefore, working together with the team at OHSU on the artificial pancreas has been a greatly rewarding experience and has allowed me to develop as a research investigator over the last 6 years. I look forward to continuing my work on the artificial pancreas and focusing my efforts on improving the accuracy of control algorithms to help treat type 1 diabetes.”
