Considering the diagnosis of Bipolar Disorder

Delineate target symptoms for intervention:

**Pediatric Mania Symptoms:** Being in an overly silly or joyful mood that's unusual for your child. It is different from times when he or she might usually get silly and have fun. Having an extremely short temper. This is an irritable mood that is unusual. Sleeping little but not feeling tired. Talking a lot and having racing thoughts. Having trouble concentrating, attention jumping from one thing to the next in an unusual way. Talking and thinking about sex more often. Binge shopping. Behaving in risky ways more often, seeking pleasure a lot, and doing more activities than usual. Psychotic symptoms such as grandiose delusions or hallucinations.

**Depressive Symptoms:** Chronic sad mood. Losing interest in activities once enjoyed. Feeling worthless. Multiple somatic complaints without physical origin. Hypersomnia or insomnia. Poor appetite with weight loss or eating too much. Recurring thoughts of death and suicide.

Rule out other reasons for manic-like symptoms

**Environmental Risk Factors:**
- Poor Sleep Hygiene
- Skipping meals
- Abuse or neglect
- Domestic Violence
- Being bullied at school
- Late night video games/TV
- Family mental illness/drugs

**Psychiatric Disorders:**
- ADHD
- Major Depressive Disorder
- Substance use disorders
- Schizophrenia
- Other Psychotic Disorder
- Anxiety Disorder
- PTSD
- Assess Suicide Risk

**Medical Masqueraders:**
- Anemia
- Seizure Disorder
- Medication side-effects
- Vitamin D Deficiency
- Thyroid Abnormality
- Encephalitis
- Head Trauma
- Delirium
- Energy Drinks
- Steroids

Bipolar dx ruled in. Determine Severity Level.

**Mild impairment no medications:**
- Bipolar psychoeducation for family and child
- "Social Rhythm" – Sleep Hygiene Plan, Exercise Regimen, Stress Reduction
- No drugs and alcohol
- School support and planning
- Provide parent resource education
- Employ family checklist

**Significant impairment or non-medical interventions alone ineffective:**

**Medications Indicated**

- Use a mood stabilizer. A trial of lithium would be first choice unless there are contraindications. Other mood stabilizers are not FDA approved for treating pediatric bipolar disorder.

If second trial of SGA ineffective or adverse reactions too severe after 4-8 weeks switch to SGA + Lithium combination

If first SGA trial ineffective (zero symptom relief) for 4-8 weeks, or adverse reactions too severe switch to second atypical antipsychotic

Trial of single antipsychotic (SGA)
- Risperidone, aripiprazole, quetiapine, or olanzapine. 2-4 weeks
- Use follow-up rating scales

Call OPAL-K

No—Use a mood stabilizer. A trial of lithium would be first choice unless there are contraindications. Other mood stabilizers are not FDA approved for treating pediatric bipolar disorder.
E-2: OPAL-K Bipolar Assessment Guidelines

- The child or adolescent interview should include open-ended questions and discussion of unrelated topics in order to assess thought processes.

- Always inquire about psychotic symptoms.

- Always inquire about suicidality which is a risk during both depressed and manic stages due to impaired judgment.

- For older children and adolescents part of the interview should occur without parental presence in order to assess risk-taking behavior, such as substance abuse, sexuality, and legal transgressions.

- Family members' behavioral observations provide corollary information regarding the patient's range of difficulties and comorbidity.

- Physical examination, review of systems, and laboratory testing are included to rule out suspected medical etiologies including neurological, systemic, and substance-induced disorders.

- The clinical interview of the youth is the cornerstone of assessment for BD. Although many young patients lack insight regarding their manic symptoms, they can often describe their internal states.

- A longitudinal perspective with a timeline of symptom evolution is needed to demonstrate cyclicity and understand the youth's illness.

- No clear role for rating scales at this time - Young mania rating scale can help families monitor for mania symptoms, but is not diagnostic alone.

- School performance and interpersonal relationships should be assessed to determine the youth's functional impairment and educational needs.

- Assess for Disruptive Mood Dysregulation Disorder (DMDD).

- Assess suicide risk.
E3: MOOD DISORDER RATING SCALES AND QUESTIONNAIRE

Young Mania Rating Scale

http://psychology-tools.com/young-mania-rating-scale/

The Mood Disorder Questionnaire

http://www.dbsalliance.org/pdfs/MDQ.pdf

The CMRS Parent Version Rating Scale

E4: OPAL-K Bipolar Treatment Guidelines

- Second Generation Antipsychotics (SGA) are the cornerstone for treatment of Bipolar Disorder (BD).

- Adjunctive antipsychotic medication can be used during acute mania to rapidly stabilize the youth, assure safety, and provide sleep. Chronic use may be needed.

- If using antipsychotic medications, establish baseline labs and then monitor for "hypermetabolic syndrome" due to hyperphagia and weight gain. Establish dietary plan and exercise regimen at the start of pharmacotherapy.

- Baseline labs should include CBC, complete metabolic panel, TSH, fasting lipid, and fasting glucose.

- Antidepressants should be avoided; but if the youth becomes depressed and is not responsive to other pharmacotherapy, cautious use of antidepressants may be necessary. Carefully monitor for manic “activation” or “switch.”

- Stimulants may be used to treat comorbid ADHD once the patient has been stabilized on a mood stabilizer.

- Adjunctive psychosocial treatments (e.g., psychoeducation, family therapy, individual therapy) are always indicated in the treatment of early onset BD. At a minimum, treatment should include psychoeducation about BD, its risks, treatment, prognosis, and complications associated with medication non-compliance.

- Constant vigilance about suicide potential during any phase of BD is indicated.

- Ongoing collaboration with the school should focus on education about BD, development of an appropriate Individualized Education Plan, and assistance with behavioral management planning.

- Longterm management will need community mental health support.
E-5: OPAL-K BIPOLAR MANIA/HYPOMANIA MEDICATION TREATMENT
ALGORITHM (v.052212)

Premedication Stage

Diagnostic evaluation and parent education regarding non-medical and medication treatments

Meds are indicated

Med-Trial 1

Monotherapy 1: FDA approved Second Generation Antipsychotic (SGA) such as quetiapine, aripiprazole, olanzapine, or risperidone.

Meds work

Continue Treatment Regimen

Meds don’t work

Med-Trial 2

Monotherapy 2: Use a different SGA. Do not combine SGAs without consultation with child psychiatrist.

Meds work

Continue Treatment Regimen

Meds don’t work

Med-Trial 3

Consult with OPAL-K Child Psychiatrist about combo Rx

Meds work

Continue Treatment Regimen

Meds don’t work

Obtain child psychiatry consultation or refer to child psychiatrist

Combo Therapy: With OPAL-K Child Psychiatrist consider using SSRI with Atypical Antipsychotic, SSRI with SNRI, SSRI with Lithium, SSRI and stimulant, SSRI and thyroid, or different antidepressant with lithium, antipsychotic, thyroid, or stimulant

E9: OPAL-K Psychosis Intervention Checklist for Families and their Bipolar Child

Living with a child who has bipolar disorder is confusing, frustrating and at times scary. The following checklist can help families become more effective in managing the behavior issues associated with bipolar children and adolescents.

Checklist for parents:
- Secure and lock all weapons or other items that can be used for self-injury or suicide since bipolar youth have an increased risk for suicide.
- Keep expressed emotions at a low level. Eliminate emotionally charged responses or scolding (try to stay positive).
- Help your child set up a written schedule for home, school, & activities in the community.
- Watch for signs of drinking or use of other drugs. Use of substances aggravate bipolar symptoms or increase risk of relapse.
- Monitor medications. Do not stop without consulting your prescribing clinician. The risk of relapse increases greatly when medications are stopped without physician supervision.

Checklist for siblings:
- Make sure you understand what mania/hypomania/depression is and what to expect for your sibling with bipolar disorder.
- Don’t feel responsible for your sibling’s behavior.
- Don’t hesitate to communicate worries to your parents about your siblings bizarre thoughts or behaviors.
- Don’t hesitate to ask your parents for attention when you need it.
- Do be patient if they are unable to meet your needs immediately.
- Have a plan of how to handle bizarre or unsafe behaviors from your bipolar sibling.
- Agree with parents on a safe place to go if needed.

Checklist for schools:
- Assist parents in getting leave of absence for student how is acutely ill.
- Help parents in getting home schooling or transfer to special education classes or day treatment if student to fragile to go to regular school.
- Check in with student about workload and adjust and adjust as needed (late arrival or early dismissal, decreased number of classes and assignment requirements).
- Be aware of multiple truancies or absences and communicate this to parents.
- Report excessive bizarre behaviors or difficulties functioning to parents.
- Assist in evaluation for IEP or 504 accommodations when indicated.

Checklist for child:
- First and foremost have regular sleep schedule. Staying up late is highly likely to aggravate or cause a relapse of bipolar symptoms.
- Take your medications regularly every day. They have less of a chance of working or keeping you well if taken irregularly.
- Stay away from caffeine, alcohol and other foods that can sleep problems.
- Make sure to tell your doctor if your medicine is bothering you.
- Develop a routine and stick it everyday. Tell your parents if your mood swings are becoming overwhelming.
- Agree with your parents on ways to keep yourself safe.
E10-11: OPAL-K SUGGESTED RESOURCES FOR FAMILIES

Books

“The Bipolar Disorder Survival Guide: What You and Your Family Need to Know, by Miklowitz DJ (2002) (For families living with an individual with Bipolar Disorder, geared to the adult, but the principles apply at all ages. The author is an investigator of family process contributing to mental illness)"

Additionally, patients and families can benefit from information and connection with support groups some of which can be found on the following websites:
