Mission
To play a critical role in the design and execution of high quality prospective clinical trials and correlative studies that involves radiation therapy and related emerging technologies.
Specific Aim
1. To identify opportunities for incorporating radiotherapy and related emerging technologies.
2. To assess methodologies such as biomarkers and parallel correlative studies, related to neoadjuvant chemotherapy or radiotherapy or new radiation delivery technologies, that may impact the primary treatment outcomes.
3. To participate in all scientific processes of ACOSOG to ensure high quality of the ACOSOG trials.
4. To assess methodologies such as biomarkers and parallel correlative studies that may impact the primary treatment outcomes.
5. To participate in all scientific processes of ACOSOG to ensure high quality of the ACOSOG trials.
