Course objectives
At the conclusion of this course participants should be able to:
1. Understand the first line treatment options for the
management of metastatic colorectal cancer.
2. Understand the indications and selection criteria for
incorporation of biologic agents into the treatment
program for patients with metastatic colorectal cancer.
3. Distinguish patients with unresectable locally advanced
rectal cancer from patients who are surgically treatable
and may benefit from intraoperative radiation therapy.
4. Understand patient selection for cytoreductive surgery
and heated intraperitoneal chemotherapy for patients
with peritoneal disease from colorectal cancer and other
peritoneal malignancies.
