

Recognizing Outstanding Service Excellence

Lisa Silbert, M.D, M.C.R.

Clinical Neurophysiology, Aging and Alzheimer's

Elizabeth Danily, Zachary DeCosta, Christopher L. Helton, Barbara Ochs, and Sherry Padgett, from Clinical Neurophysiology submitted the following nomination...

Last Wednesday would not have been possible without Dr. Silbert. Our Intra-Operative Neurological Monitoring (IOM) manager was out of the office so we were a little short staffed for techs to perform neuro monitoring in the operating room(OR). We usually have three or four cases a day in the OR but last week was the exception. On Wednesday we reached a maximum of seven cases. Panic began to sink in as we realized that we really didn't have enough people to cover seven cases going all together. Normally an attending for our service monitors each case remotely, via a laptop computer, but on Wednesday Dr. Silbert helped us out tremendously by coming to the OR to help us monitor one of the cases. She physically came to the OR to take over monitoring which allowed the team to monitor every IOM patient on our schedule. Thankfully she was able to monitor from the OR until we were down to 5 cases and able to once again take over. This kind of service is just so tremendous that our team really wanted to say thank you to her by nominating her for a Golden ROSE. We couldn't have made it through all those cases without her! Thank you Dr. Silbert- we really appreciate you and all the work you do.
