SPEAKING CLEARLY
ABOUT RESEARCH SINCE 1981

Understanding Trauma: When the Fear Switch is Always On

PRESENTED BY

Alisha Moreland-Capuia, M.D.

Can experiencing a traumatic event affect the biology in your brain? Dr. Moreland-Capuia discusses significant advances in our understanding of the role that fear plays in trauma and new evidence-based practices for effectively recognizing, treating and managing the impacts. A trauma-informed

approach can help the brain heal effectively and support the capacity for recovery and resilience.

A public service
honoring the memory
of Elizabeth N. Gray,
founder of the Marquam
Hill Steering Committee
