# Advanced Computing Center

The Advanced Computing Center (ACC) at OHSU meets the computing needs of the OHSU research, academic and administrative community by providing a flexible and scalable set of advanced computing services that augment and supplement no-cost, enterprise-level services provided to OHSU by the Information Technology Group.

The ACC offers virtual server environments, applications for research computing systems, secure and public web portals and a large suite of open source applications. Provisioning is available for individual compute clusters, scaled and configured to meet the needs of individual customers across the institution.

The ACC provides a variety of technical services, including consulting, hosting, backups and storage. These services are designed with the needs of research in mind, facilitating remote collaboration and co-located computing capabilities.

Features

• Support for the Exacloud Resource Computing Cluster, Research Data Storage service and selected Amazon Web Services (AWS)
• Data center hosting services featuring: redundant and emergency power, cooling, multiple layers of security, and high-speed networking
• No charge for Pre-Award Consulting Services
• Knowledgeable and experienced staff members can provide planning assistance and consulting services
