

Gastroschisis

Gastroschisis (gas-troh-skee-sis) is a birth anomaly of the abdominal (belly) wall. There is a hole in the muscle and skin next to the belly button. The baby's intestines come out through this hole. The hole can be small or large and other organs, such as the stomach and liver, can also be found outside of the baby's body. Gastroschisis occurs early during pregnancy when the muscles that make up the baby's abdominal wall do not form correctly. To learn more about Gastroschisis, go to the CDC website (tinyurl.com/lfb7rm8).
