BLOOD PRESSURE MONITORING RENAL DONOR SCREENING

As part of the initial screening process for potential kidney donation, you will need to take your blood pressure on three different days. Each day this will need to be done at a different time. For example: Thursday morning, Friday afternoon, and Saturday evening. We only need the one reading per day.

These *do not* have to be done at a doctor's office; they can be done at a drug store, the fire station, etc.

Morning B/P reading: _____/_____
