SHEIDD* Review of Sexual Health Education Curricula Designed for People with Disabilities

Members of the Community Advisory Group of the Sexual Health Equity for Individuals with Intellectual/Developmental Disabilities (SHEIDD) project* reviewed a number of healthy relationships and sexuality education curricula designed for people with disabilities. Below, we have ranked them based on how holistic we found them to be and shared our opinions on some of the strengths and weaknesses of each curriculum.

Through the review process, we learned that all of these sexual health curricula need to be adapted to be more rights-based, sensitive to individual and collective trauma and inclusive and affirming of people of all genders and sexual orientations, races and cultures. Some of the curricula also need to be updated as they have out-of-date or incorrect sexual health information.

We encourage you to review sexual health education curricula and consider what adaptations you would make to fit the needs of your communities. You can learn more about the tool we used to review these curricula in the document “Using the Sexuality Education Protocol Tool to Evaluate Sexual Health Education Curricula Designed for People with Disabilities” found in the Curricula designed for people with disabilities section of the Teaching Tools page of the SHEIDD online resource hub.
