Transportation Demand Management Plan (TDM)

MARCH 2018

CONTENTS

1. What is the OHSU TDM plan? 5
2. How was the plan developed? 13
3. What are the issues and opportunities? 19
4. What is the OHSU vision? 29
5. How will OHSU achieve the vision? 37
6. What are the estimated impacts? 49
Since 1995 OHSU has experienced 150% growth in both employees and patients.
1.

What is the TDM Plan?

OHSU prides itself as a national leader in health and science innovation.

OHSU’s current work and long-term vision prioritizes further innovation and transformation of not only the health care sector, but for also the Portland community in which it resides. In addition to providing industry-leading health care services, OHSU is one of the region’s biggest employers with roughly 16,000 employees and 2,900 students.

Since 1995, OHSU has experienced 150% growth in both employees and patients, as well as construction of a new campus on the South Waterfront and new development on Marquam Hill. OHSU will continue to grow and evolve in the next ten years. New and planned development on the South Waterfront and ongoing improvements at Marquam Hill will result in substantial expansion of OHSU’s physical footprint, population size, and patient services.

Anyone who travels to OHSU experiences its unique transportation issues. Steep terrain, constrained roadways, and major barriers like the Willamette River and I-5 present significant mobility challenges for patients and employees. Furthermore, OHSU must operate within a regulatory environment that restricts how much it grows, where it can grow, and to what degree it can build additional parking.

Confronted with these challenges, OHSU has built a renowned transportation program. As of 2017, only 38% of employees drive alone to the Marquam Hill and South Waterfront campuses, a remarkable achievement. Still, as OHSU’s growth continues, it is simply not enough. OHSU’s ability to achieve its vision will be determined by many factors, but the degree to which it can provide accessible, convenient, and affordable travel options will be central to its success.
A Mobility Roadmap

The Transportation Demand Management (TDM) Plan is OHSU’s mobility roadmap for the next decade. It comes at a pivotal moment for OHSU. OHSU initiated this comprehensive study to address its current and future transportation and parking challenges head-on, knowing that it must innovate if it wants to continue to grow, provide high-quality medical care, attract and retain the best talent, and ensure a positive and rewarding work environment for its valued employees.

Using a data-driven approach, informed by input from a diverse group of OHSU leaders, employees, and stakeholders, this Plan provides a strategic, flexible, and actionable framework that will help OHSU:

- Support campus development and allow OHSU to meet the growing demands.
- Manage a complex transportation system with tools that are dynamic, user-friendly, and cost-effective.
- Satisfy the unique needs of employees, students, patients, visitors, and nearby neighborhoods.
- Exceed mobility expectations of employees, students, patients, and visitors.
- Offer a convenient suite of travel options for employees throughout the region.
- Support the organization’s values — transparency, diversity, quality, and service excellence — and bottom line.

This Plan also recognizes that the time for action is now. The Plan provides recommended strategies and includes actionable next steps that sets OHSU up for immediate progress and long-term success.

Overview of the Plan

Chapter 2 summarizes the project approach, including an overview of the project process and timeline, project advisory committee, and stakeholder outreach program.

Chapter 3 summarizes the problem statement and key findings from the existing conditions analysis. It also documents a timeline of key events that have driven development of this Plan and its proposed implementation.

Chapter 4 describes the OHSU vision for mobility and summarizes the goals, objectives, and performance metrics that will guide its implementation.

Chapter 5 summarizes the five key initiatives, or “Playbook,” and the 34 specific strategies which will allow OHSU to achieve its mobility vision and goals. The strategies are organized into seven categories, or “Plays.”

Chapter 6 documents the implementation program, including a summary of the TDM scenarios, trip impact assessment, and financial analysis.

The complementary Strategy Dashboard provides documentation for each strategy, including a description and summary of evaluation and costing.
What was the study area for this Plan?

The study area for this Plan primarily focuses on employee commutes at the Marquam Hill and South Waterfront campuses. However, the analysis and strategy development carefully considered all OHSU facilities and users. Its implementation will offer benefits to all employees, students, patients, and visitors.
The OHSU TDM plan builds on the 2018–2020 OHSU Strategic Plan to reinforce and enhance the vision, values, and culture of the institution. Recommendations in the TDM Plan align with the overall OHSU vision statement:

*National leadership in health and science innovation for the purpose of improving the health and well-being of Oregonians and beyond.*

To support this vision, the TDM Plan will improve access for employees, students, patients, and visitors. The TDM Plan also reflects and upholds the institution’s core values.

**Transparency:** The TDM Plan encourages accountability and builds credibility with a commitment to reducing the employee drive-alone rate to 30% by the end of 2027.

**Diversity:** Recommendations of the TDM Plan address the transportation needs of a diverse range of users.

**Quality:** The TDM Plan establishes a set of mobility goals, objectives, and performance measures that will hold OHSU to high standard.

**Service Excellence:** The implementation of the TDM Plan will improve patient access to OHSU, enhance the patient experience, and support OHSU’s commitment to service excellence.

The TDM Plan itself sets ambitious, yet realistic mode split targets that will require all OHSU affiliates to work together. Leveraging the OHSU culture—the power of one—will allow the institution to have a long-standing positive impact on local and regional mobility.
What is the TDM plan?

The Transportation Demand Management (TDM) Plan is OHSU’s mobility roadmap for the next decade. It comes at a pivotal moment for OHSU. OHSU simply cannot grow as planned with a parking-only approach.

OHSU must continue to innovate with a comprehensive package of transportation solutions for employees, students, patients, and visitors. This Plan provides a strategic, flexible, and actionable framework that will support the organization’s values and bottom line.

What will it do?

As of 2017, 38% of OHSU employees at Marquam Hill and South Waterfront are single-occupancy vehicle (SOV) commuters. The Plan establishes an ambitious, yet realistic 30% employee SOV target by 2028.

By 2028, more than 13,800 employees would be walking, biking, taking transit, sharing rides, or telecommuting; a 62% increase from 2017.

Between 2017 and 2027 mode share will change

<table>

</tr>
</tbody>
</table>
The Plan implements a suite of recommendations that also allow OHSU to manage its parking cost-effectively. Targeted investment in new parking supply, coupled with forward-thinking management practices and TDM programs, will ensure parking is consistently available for those that need it.
Employee/Student Permit Parking Ratio

Approximately 5,200 permitted parking spaces are available to employees and students—a ratio of one space for every 3 employees/students. The demand per stall is expected to continue to greatly exceed supply, indicating a need for parking management and TDM programs.

High Impact + High Priority Strategies

The TDM Plan includes 34 strategies within seven categories – Policy (P), Transit (T), Pedestrian (PN), Bike (B), Shared Mobility (SM), Parking (P), and Programs + Communications (PC). Eleven of these strategies have been identified for priority implementation as they can quickly reduce parking demand and improve the commute experience.

The Strategy Dashboard document summarizes all of the strategies. These include:

- 11 High-Impact + High-Priority
- 19 Support
- 4 Long-term + Regional
Stakeholder feedback was essential for the project team to understand the major issues.
2. How was the Plan Developed?

The OHSU TDM Plan was informed by a robust and inclusive outreach program.

Stakeholder feedback was essential for the project team to understand the major issues and challenges from a variety of user groups. In addition, the outreach efforts allowed the project team to test and shape the potential strategies and recommendations.

Input from employees, students, patients and visitors, neighborhood associations, transportation and parking staff, and staff from other OHSU departments was included in the Plan. The major components of the outreach plan included:

TDM PLAN PROCESS

Project Management and Meetings
- Project kick-off and project management meetings
  - Feb – Dec 2017

Goal Setting
- Project vision and goals established with OHSU leadership and project team
  - Mar – May 2017

Existing Conditions
- Analysis and documentation of existing programs, services, and infrastructure
  - Apr – Aug 2017

Issues and Opportunities
- Issues and opportunities related to employee communications and outreach, programs, mobility platforms, and parking management
  - Jun – Jul 2017

Best Practices
- Employee and neighborhood focus groups
  - May – Oct 2017

Surveys
- Employee and patient surveys to gather feedback about initial strategies
  - Jul – Oct 2017

Outreach
- Best practice research to help inform strategies
  - Aug – Oct 2017

Strategy Development and Evaluation
- Evaluation of tradeoffs and impacts of programmatic and policy strategies
  - Jul – Oct 2017

Recommended 10-Year Plan
- Draft and Final 10-Year TDM Plan
  - Oct – Dec 2017

Stakeholder Advisory Committee
- May – Dec 2017
Stakeholder Advisory Committee

The Stakeholder Advisory Committee (SAC) provided input and guidance throughout the development of the OHSU TDM Plan. The SAC was comprised of a diverse group of campus affiliates across multiple OHSU departments. Members included:

Outreach Highlights

Outreach from community and campus stakeholders played a vital role throughout the planning process. In April, the project team held a Goal Setting Workshop to identify guiding values, priorities, and outcomes for the project and OHSU’s overall approach to transportation and mobility. Fourteen OHSU stakeholders from a wide range of departments participated in the workshop.

A series of three Employee Focus Groups were held in May. The groups were organized by commute mode – transit riders, bicyclists and pedestrians, and drivers/passengers (drive-alone, drop-offs, or carpools). To achieve a cross-section of feedback, each focus group had a mix of employees based on their primary work location, job classification, work shift, tenure, gender, and age.

A total of 31 employees participated in the focus groups. These focus groups helped provide the project team with a more nuanced understanding of perceptions of the existing commute program, parking issues, and programs that could help employees change their travel behavior.

Two Neighborhood Focus Groups took place in August and September: one with the South Portland Neighborhood Association and another with the Homestead Neighborhood Association. The focus groups provided a forum for nearby Portland residents to identify transportation related issues and opportunities for the OHSU campus, as well as in their neighborhood.
An **Employee Travel Survey** in mid-September solicited further information on employee commuting patterns and preferences for commuter transportation programs at OHSU. A total of 1,405 employees responded to the survey. The survey focused on a series of strategy categories including parking, transit, bicycling, walking, ridesharing/carpooling, telecommuting, and policies and programs. Detailed employee survey findings are available in Appendix.

A **Patient/Visitor Travel Survey** was also made available in September in parking facilities on campus. A total of 725 survey responses were collected. The survey asked patients and visitors about their priorities for improving the OHSU parking system, and potential strategies that would be of interest as an alternative to driving. Detailed patient/visitor survey findings are available in Appendix.
With a low drive-alone rate, OHSU is the envy of many of its national peers.
3.

What are the Issues and Opportunities?

OHSU's past and ongoing investments in transit, biking, walking, and major infrastructure improvements have been vital in allowing OHSU to grow and thrive to this point.

With a low drive-alone rate, OHSU is the envy of many of its national peers. However, OHSU must continue to innovate and push the status quo if it is to grow, diversify, and provide high-quality health care services and employment opportunities.

A detailed existing conditions analysis informed the development of the TDM Plan, including a review of OHSU planning documents and local and regional policies and plans. Parking data and multimodal programs were also analyzed to identify key trends and opportunities for improvement. Stakeholder workshops and employee surveys provided another layer of input, allowing the team to go beyond the data and fully understand the employee and patient experience.

This chapter summarizes the key findings, primary issues, and opportunities for improvement that ultimately shaped the development of the TDM Plan and its recommendations. In the end, there is no single or simple problem statement for OHSU to fix. OHSU's transportation and mobility challenges are multifaceted, nuanced, and driven by not just OHSU itself, but also regional and societal trends. Nevertheless, there are many areas where OHSU can improve, while leveraging its ability to innovate in response to seemingly intractable challenges.
In the end, there is no single or simple problem statement for OHSU to fix.
OHSU has experienced significant growth since 1995. The campus is expected to continue to grow with more employees, students, patients, and visitors.

Between 1995 and 2016, the overall OHSU employee population increased by 142%, the patient population increased by 159%, and the student population grew by 62%.

By 2027, more than 19,100 employees and almost 450,000 patients annually are projected at Marquam Hill and South Waterfront. In addition, 2,400 students and several thousand contractors and volunteers are also expected on an annual basis.

Physical expansion of the campus will continue, especially on the South Waterfront. Approximately 1 million square feet of new facilities will be built on the South Waterfront by 2019. Ongoing facility expansions and improvements are also planned for Marquam Hill.

The rate of employees driving alone to campus is trending down. Walking and biking mode shares have grown substantially.

Driving alone is the primary commute mode — 38% for Marquam Hill and South Waterfront employees. OHSU outperforms the City of Portland as a whole, which has a 58% SOV rate.

Drive alone rates are higher for those that live farther from campus and to the east and west of Portland. The Portland Transportation System Plan calls for 70% of commuters to walk, bike, take transit, carpool, or telecommute by the year 2035.

Between 2007 and 2017, the SOV rate at the Marquam Hill campus has decreased, while walk and bike share have gone up. Bike mode share has almost tripled in the last decade. By contrast, the carpool and transit mode shares have decreased.
Many parking facilities at OHSU are often at or near capacity today. New parking is planned, but estimated growth will outpace new supply with “status quo” driving rates.

<table>
<thead>
<tr>
<th>PATIENT</th>
<th>26%</th>
</tr>
</thead>
<tbody>
<tr>
<td>EMPLOYEE</td>
<td>73%</td>
</tr>
</tbody>
</table>

OHSU currently has 6,914 parking spaces — 4,314 at Marquam Hill, 1,908 at South Waterfront, and 692 at satellite parking lots. Approximately 73% of spaces are for employees and about 26% of spaces are for patients/visitors.

Many facilities, especially on Marquam Hill, often reach 100% occupancy. Parking demand across campus is trending up.

With the construction of the Knight Cancer Research Building and the Rood Family Pavilion, 681 new parking stalls at the South Waterfront will be available by 2019.

Based on assumed growth rates, a “status quo” 38% employee SOV rate could result in an estimated deficit of 2,300 spaces by the end of 2027.

OHSU cannot simply build its way out of its parking problem.

City regulations and area plans restrict the amount of parking that OHSU is allowed to build on both the Marquam Hill and South Waterfront campuses.

Land and topography constraints, especially on Marquam Hill, also reduce the feasibility of new parking construction.

Parking is very expensive to build and maintain. The current construction cost per space at OHSU is approximately $70,000, resulting in annual costs per space of about $5,900. Average annual revenue per space is roughly $1,900.
Peak congestion on and off Marquam Hill impacts motorists and transit riders in a significant way. Certain corridors and key intersections, such as Sam Jackson Park Road and Terwilliger Road, create massive bottlenecks.

It is now common practice for bus drivers to let passengers off during the evening peak so that they can walk down the hill.

In the Portland region, hours of congestion and daily vehicle hours of delay have grown by more than 13% and 22%, respectively, since 2013.

Congestion is a current challenge and a long-term threat to OHSU.

What We Heard

“The congestion getting off campus at 5 p.m. is unacceptable. I have to stay late to avoid sitting on the bus for an extra 40 minutes.”

“We need a better way to get from South Waterfront to westbound US-26. The gridlock through downtown in the late afternoon has me on a 5 a.m. to 2 p.m. schedule.”
What We Heard

“I cannot afford any of the housing that is close enough to OHSU.”

“As housing costs close in soar, employees are going to be commuting from farther and farther away.”

As regional housing costs increase, transportation and access is a growing factor in employee attraction and retention.

OHSU is a regional employer, with 47% of employees living outside Portland.

Median home prices in the City of Portland increased by 226% between 1996 and 2016, much faster than other cities in the region.

The average distance is 8.5 miles for non-SOV commutes and 11.5 miles for SOV commutes. A greater share of OHSU employees will likely be commuting farther distances as employees search for less expensive housing.
What We Heard

“Line 66 would be perfect for me to take, but it stops running too early in the morning and is too infrequent in the evenings.”

“It takes on average 1.5 to 2 times as long to get to work by public transit for me living north of Vancouver.”

“It takes a little more than an hour for a bike commute. As an inexperienced biker, I’m not sure if I really want to venture into this.”

“There is not enough time to take my child to daycare and get to work with a bike.”

For many employees continue to drive because it is still faster than other modes. The number one reason OHSU employees indicated they drove to work was to “save time.” Based on ECO survey respondent data, the average daily commute for employee drive alone trips was 48 minutes, compared with 69 minutes for light rail or 86 minutes for bus.

For many employees, local and regional transit does not provide enough direct or frequent service, especially for employees that commute during off-peak hours.

Many employees value the flexibility of having their own car at work in case of emergency, errands, or childcare.
Annual permits incentivize driving and create employee frustration.

Annual parking permits offer a steep discount when compared with daily “market” rates. For example, holders of a 1D permit on Marquam Hill pay the equivalent of $8.38 less per day than the current daily rate.

Annual permits represent a “sunk” cost for employees. Once an employee pays for it, they want to get their money’s worth.

Due to the long parking wait lists, employees are encouraged to sign up for a parking permit. Once they have one, they are discouraged from giving them up, even if they no longer drive.

On average, employees on the parking waitlist are signed up for four different permits. Many believe the current system is inequitable.
Many employees would like to walk or bike, but do not feel comfortable, safe, or well-served by existing facilities. Many employees want to telecommute, yet policies are inconsistent.

**What We Heard**

“I would be willing to bike 12 miles round trip to work if there were better bike lanes from my house in northeast to the tram.”

“Some of the bike routes to OHSU are on a busy road or they run through areas that do not feel safe in parts. If there were better and more designated routes from my home, I would bike to work every day.”

“I would gladly ride to work if I had a place to shower for free near my workspace.”

“If telecommuting were more accepted I would not be looking outside OHSU for a different job right now.”

More than one-third of employees indicated that they would like to bike or walk over their current mode.

Accessing Marquam Hill via bike can be challenging for many people due to the topography and higher-speed corridors.

A number of key corridors and intersections in proximity to, or directly serving OHSU have a greater share of collisions. S.W. Campus Dr. and S.W. Terwilliger Blvd. had the highest number of collisions on roadways near campus; 2004 – 2013.

Telecommuting at OHSU remains very limited at less than 1% of commutes, compared to almost 8% in the City of Portland.
To push the drive-alone rate even lower, OHSU needs a well-defined vision and goals framework.
4.

What is the OHSU Vision?

Over the past two decades, OHSU developed and implemented a multimodal transportation program, allowing the institution to grow and provide access for its employees, students, patients, and visitors.

The current program evolved organically, as OHSU tested various policies and strategies to meet its growth and affiliate needs. While OHSU has achieved a low drive-alone rate for employees, more work is needed.

In order to push its employee drive-alone rate even lower, and provide a first-class mobility experience for all users, OHSU needs a comprehensive and well-defined vision and goals framework to guide its future work. This framework provides:

• **A strategic plan for leadership**, demonstrating how OHSU’s investments in transportation support and reflect its core values.

• **A reference point for the broader OHSU community**, ensuring that transportation and mobility are fully integrated into the campus culture as well as other planning efforts and campus initiatives.

• **A guidebook for transportation and parking staff**, allowing them to operationalize the TDM Plan, engage OHSU affiliates, measure progress, adjust programs and policies, inspire change in travel behaviors, and demonstrate the benefits of investments in TDM.

The TDM Plan included a robust process with the Stakeholder Advisory Committee and OHSU staff to define a vision statement and set of goals, objectives, and performance measures. Other campus plans were reviewed to ensure alignment with OHSU’s overall values — Transparency, Diversity, Quality, and Service Excellence — as well as local and regional transportation plans.

The vision, goals, objectives, and performance measures answer the following questions:

• **Vision**: What is the guiding statement for OHSU’s ongoing approach to transportation, mobility, and access?

• **Goals**: What values guide this work? What are the desired outcomes?

• **Objectives**: What specific actions will allow OHSU to achieve the goals?

• **Performance Measures**: How will OHSU measure success and demonstrate the effectiveness of its transportation investments? What are the key indicators and supportive metrics that will measure performance?
Vision Statement
As a leader in health and innovation, OHSU will provide a flexible transportation program that allows employees, students, patients, and visitors to choose safe and convenient travel options to, from, and within campus. To facilitate campus growth, the transportation system will reduce reliance on single-occupancy vehicle trips through the promotion of cost-effective, sustainable, and multimodal mobility solutions.
## Goals, Objectives and Performance Measures

<table>
<thead>
<tr>
<th>GOAL</th>
<th>OBJECTIVE</th>
<th>PERFORMANCE MEASURE</th>
</tr>
</thead>
</table>
| **Patient-first** | • Inform patients about their parking and travel options early and often.  
• Support both inpatient and outpatient care.  
• Reduce overall employee demand for parking.  
• Reduce employee abuse of patient parking. | **Key Performance Indicators**  
• Patient satisfaction survey.  
• # of annual patient visits.  
• % of late/missed appointments.  

**Additional Metrics**  
• % of available parking spaces by facility.  
• # parking "redline" events by facility.  
• # of patient valet drop-offs/retrievals.  
• # of patient complaints. |

Prioritize the patient travel experience to ensure that OHSU is a first-choice destination for medical care.

| **Employer of Choice** | • Eliminate transportation as a barrier to employee attraction/retention.  
• Provide affordable, equitable, and active travel choices.  
• Provide parking choice, so that employees only park on the days they need to.  
• Encourage telecommuting for those whose roles allow for it.  
• Reduce travel times to/from/within campus.  
• Make programs easy to use, deliver, and administer. | **Key Performance Indicators**  
• Employee/student satisfaction survey.  

**Additional Metrics**  
• Average travel time to campus by mode.  
• # of program participants.  
• # of employee complaints.  
• # of employees who cite commuting as reason for leaving or not taking position. |

Ensure efficient and convenient employee access so that OHSU is a first-choice employer.

• # of patients treated via telemedicine. |
SOV Target

OHSU conducts the annual Transportation Census using a sampling methodology to get a representative cross-section of employees. As of 2017, 38% of OHSU employees at Marquam Hill and South Waterfront are single-occupancy vehicle (SOV) commuters.

Moving forward, the SOV target will be a key performance measure for OHSU to track progress towards its mobility vision, goals, and objectives.

This TDM Plan establishes 30% SOV mode share target by 2027 for Marquam Hill and South Waterfront employees. This target represents an ambitious, yet realistic target for the 10-year planning period.

- With this target, OHSU would need to **shift slightly less than 1% of SOV commuters to another mode** each year.

- Based on estimated employee growth, achieving a 30% target translates to almost **1,750 fewer SOV commuters** than if OHSU maintains its current 38% SOV rate.

- By 2027, more than **15,300 employees would be walking, biking, taking transit, sharing rides, or telecommuting.** That would represent a 71% increase over the number of employees doing so today.

- The **2027 non-SOV mode splits represent a “target” and one possible, yet achievable, scenario for changes in travel behavior based on the proposed TDM Plan.**

- OSHU should **refine the future year targets with each annual Transportation Census.**

Marquam Hill and South Waterfront employees only
The TDM Plan establishes 30% SOV mode targets by 2027. This target is ambitious yet realistic for the 10-year planning period.
How will OHSU Achieve the Vision?

The OHSU TDM Plan establishes an aspirational vision and set of goals for transportation and mobility.

The short- and long-term approach must be ambitious so that OHSU can grow without gridlock, ensure long-term financial sustainability, and create a first-class travel experience for its current and future employees, students, patients, and visitors.

The TDM Plan builds off OHSU’s strong multimodal foundation, but pushes forward-thinking solutions. Solving OHSU’s existing and future challenges in the face of rapid growth requires a multifaceted set of solutions. In the end, OHSU will achieve success if it can continually emphasize the following key concepts:

There is no “silver bullet.” The recommendations represent a package of necessary reforms. Implementation of one or two items alone will not solve OHSU’s mobility and parking challenges.

Change is difficult, but necessary. The Plan offers bold and innovative approaches. OHSU faces significant challenges; solving them will require them to go beyond the status quo.

Communication is vital. Ongoing communication of the Plan’s rationale, benefits to the institution and individual, and the practical details will be crucial to increasing program participation, improving the patient and employee experience, and securing stakeholder buy in.

The Plan is a “living” document. The Plan provides a roadmap and framework for moving forward. It is based on detailed analysis and best practices, but no TDM plan gets it all right the first time. OHSU must be flexible and continually evaluate its performance. A “test and learn” approach based on robust data will allow OHSU to respond effectively as local and regional conditions change.

Immediate improvement is needed…and possible. OHSU has challenges today. The upcoming Portland Aerial Tram shutdown in mid-2018 is also a significant milestone to address. Certain strategies should be prioritized to secure tangible progress and build further support for future phases of work.
How do we get there?

THE STRATEGIES
High-Impact + High Priority Support
- Long-term + Regional
The OHSU TDM Plan Playbook includes five primary initiatives or “levers” to reduce single-occupancy vehicle trips and improve the overall travel experience to, from, and within OHSU.

All of these elements are required to ensure long-term success. Too much emphasis on one, or ignoring some altogether, will reduce the efficiency of OHSU’s mobility program and trip reduction efforts.

</tr>
</tbody>
</table>
The Plays

OHSU will implement the Playbook via seven categories, or Plays. All of the Plays and their strategies should work in tandem and mutually support one another. For example, OHSU’s ability to price parking effectively is dependent upon not only the price of parking itself and parking technology, but also the larger policy and communication strategies around why OHSU charges for parking and how it benefits campus access and mobility.

The seven Plays include:

- **POLICY (PO)**
- **TRANSIT (T)**
- **PEDESTRIAN (PN)**
- **BIKE (B)**
- **SHARED MOBILITY (SM)**
- **PARKING (P)**
- **PROGRAMS + COMMUNICATIONS (PC)**

</tr>
</tbody>
</table>
The seven Plays and their respective strategies are summarized below. A total of 34 strategies are included in the Plan.

While every strategy is important, not every strategy is “equal.” The TDM Plan categorizes each strategy into one of three implementation categories.

- **High-Impact + High-Priority**: A strategy that has proven ability to reduce SOV trips and parking demand substantially and/or improve the travel experience in dramatic ways. A strategy that should be implemented in advance of other strategies and/or to address an immediate or short-term challenge, such as the Aerial Tram shutdown.

- **Support**: A strategy that facilitates, enhances, or supports one or more of the other strategies.

- **Long-term + Regional**: A strategy that requires significant additional evaluation, planning, or analysis. These strategies are long-term efforts that will likely require regional partnerships and funding.

### High-Impact + High Priority

**P O. 2 – Active Workplace Culture and Training**

Adopt official policies that support an active and flexible work environment that makes it easy to walk, bike, share rides, or take transit to and from OHSU. Enhance executive and management training to ensure that OHSU leaders fully and consistently integrate mobility programs and policies into their departments.

While seemingly simple, clear and consistent policies can dramatically shift the culture around transportation. Given the upcoming impacts of the tram shutdown, and bold approaches proposed in this Plan, a renewed focus on the culture of mobility at OHSU is a priority.

**P O. 4 – Telecommuting Policy and Program**

Further develop and adopt robust and consistent telecommuting policies and training to increase the share of employees telecommuting one or more days a week.

Less than 1% of OHSU employees telecommute, yet many indicate that they would like to start, or do so more. Consistent policies and well-trained managers would increase the number of employees telecommuting, a cost-effective way to quickly reduce employee parking demand.
**T.1 – Transit Service Improvements**

Work with TriMet and C-TRAN to provide more express and frequent bus service to OHSU campuses. Restructure the OHSU shuttle service to increase frequency over time and minimize duplicative services. Explore a new shuttle contract to improve service and vehicle quality.

More direct and frequent service could capture some of the existing OHSU employees who still find driving to be the most convenient commute mode. A new shuttle service and operating plan will be essential during the five-week tram shutdown, yet should include a long-term vision to respond to OHSU growth.

**P N.1 – Pedestrian Access Improvements**

Work with local and regional partners to complete pedestrian network gaps to, from, and within campus. Continue to invest in a connected street network and roadway improvements that prioritize safety, comfort, and access for all pedestrians.

Priorities should include high-collision corridors and existing walking paths on and off Marquam Hill. Such improvements will greatly improve pedestrian flow and safety on campus, as well as set the stage for increased walking activity, especially during the Tram shutdown.

**B.1 – Bike Access Improvements**

Work with local and regional agencies and partners to complete gaps in the bicycle network to, from, and within campus. Continue to invest in a connected network of bike facilities that is comfortable and accessible for a range of bike riders.

As feasible, prioritize physically separated facilities on major corridors. Such improvements will greatly improve bicycle safety to and from campus, as well as set the stage for increased biking activity, especially during the Tram shutdown.

**B.2 – Bike Parking Improvements**

Continue to invest in a diverse and high-quality bike parking program at OHSU. Prioritize expansion of bike parking to meet increasing demand. Plan for and invest in major new facilities, such as expanded bike valet on South Waterfront and a bike station on Marquam Hill. Require high-quality bike parking facilities for all new development.

New facilities should not only provide a safe, secure space for parking, but also incorporate and/or easily connect with showers and locker rooms.

**S M.1 – Employee and Patient Lyft Program**

Partner with Lyft to implement an employee rideshare solution that partially subsidizes certain trip types. Enhance the patient experience by partnering with Lyft to subsidize a portion of non-emergency medical trips. Streamline rideshare loading on campus by designating and developing pick-up, drop-off, and vehicle staging policies and locations throughout campus. OHSU is currently negotiating with Lyft to launch a pilot program in 2018. The Lyft subsidy and program would be facilitated by implementation of the Luum commute platform (Strategy PC.4).
**SM.2 – Internal and Dynamic Carpooling Program**

Launch an on-demand/dynamic carpooling service internal to OHSU employees, and provide subsidies for SOV employees who share a ride. Peer-to-peer, on-demand ridesharing matches co-workers and neighbors based on home location, route, predicted traffic, and user feedback.

OHSU is currently negotiating with Scoop to launch a pilot program in 2018. The Scoop carpooling program would be facilitated by implementation of the Luum commute platform (Strategy PC.4).

**P.1 – Permits and Daily Pricing**

Transition away from monthly parking permits to daily parking permits at all facilities, allowing employees to pay for parking only on the days they drive. Vary pricing charges by location and time of entry to manage demand. Automatically link daily payments to employee account and commute platform to facilitate easy use. Utilize parking restrictions/eligibility requirements as needed to manage employee demand for parking.

Daily parking charges can dramatically affect parking demand. Daily parking charges eliminate the “sunk cost” of a monthly or annual permit, reducing the incentive to drive every day to get “my money’s worth.” A daily pricing structure also offers flexibility for employees depending on their daily needs and does not lock them into any one mode.

**PC.2 – Daily Financial Incentives**

Develop and implement a daily financial incentive program to reduce SOV mode share and promote biking and walking to campus.

A daily financial incentive program would complement daily parking pricing (Strategy P.1) and an employee commute platform (Strategy PC.4), offering a strong “carrot” to incentivize non-SOV travel.

**PC.4 – Employee Commute Platform**

Unify all mobility related information and services in an online and mobile commute platform, including a dashboard with modal information, commute calendar, trip stats, incentives, and payment/incentive integration. Integrate with real-time data and other 3rd-party mobility platforms.

OHSU is currently negotiating and planning with Luum to launch a commute platform in April of 2018 in anticipation of the Tram shutdown.
How were the OHSU TDM Plays and Strategies developed?

The Plays and Strategies were developed as part of a collaborative process with the project team and key stakeholders. Informed by the existing conditions analysis, identification of issues and opportunities, and industry best practices, the project team held an interactive charrette to brainstorm a set of strategies across all parts of the OSHU mobility and travel experience. A list of 87 ideas were developed during the initial brainstorm.

This large set of concepts were then grouped by category, refined, and screened against the previously defined project goals (see Chapter 4). In addition, criteria related to number of employees impacted and implementation timeline were included for the screening task. Each strategy was given a qualitative score, with higher weights applied to criteria related to multimodal access, cost-effectiveness, and level of impact.

Strategies were then presented to the Stakeholder Advisory Committee (SAC) for feedback and input. These strategies were tested in the employee survey, asking respondents to prioritize which investments would help their commute the most. The screening process, SAC feedback, and employee survey results allowed the project team to eliminate and combine individual concepts into the package of 34 strategies.

</table>
Ultimately, the model should be viewed as a useful tool to arrive at the preferred path forward.
What are the Estimated Impacts?

The OHSU TDM Plan proposes a comprehensive package of strategies to reduce drive-alone rates and parking demand, increase multimodal access, and improve the overall travel experience to, from, and within OHSU.

In order to understand the potential trip reduction and financial implications of these investments, as well as refine the strategies themselves, a model was developed that illustrates the financial impact, mode split, and parking demand for different levels of investment in TDM and parking.

This exercise provided a planning-level estimate of the costs and trip reduction benefits of the TDM Plan. While based on industry standards, the latest empirical research, and best practices, it includes several assumptions about how OHSU will grow and change, and how OHSU affiliates will modify their travel behavior in response to the TDM strategies. There are dozens of possible iterations of the model, and modifying the assumptions and changing the scenarios would result in different outputs.

This chapter provides a high-level summary of the modeling effort and its results. The results represent the best estimate of potential outcomes. Ultimately, the model should be viewed as a useful and ongoing tool to evaluate the “goal posts” and tradeoffs inherent in the TDM Plan to arrive at the preferred path forward. As discussed in Chapter 5, the TDM Plan is “living” document, ready for ongoing revision and recalibration over time.
Methodology

The basic modeling steps included:

1. Review current campus population and parking supply/demand by user group (employees, students, patients, and visitors). Parking demand is based on observed occupancy data.

2. Estimate future population of each user group, based on OHSU assumed growth rates.

3. Project parking supply changes based on loss or addition of parking facilities. Develop three parking supply scenarios – Planned, Moderate, and Maximum.

4. Develop list of parking and TDM strategies. Differentiate strategy investments into three scenarios – Baseline TDM, Moderate TDM, Maximum TDM.

5. Estimate trip reduction impacts for each strategy and for each TDM scenario. Elasticities developed by the California Air Pollution Control Officers Association (CAPCOA) were applied for selected measures, representing the best existing research on trip and parking generation. A range of trip demand elasticities by scenario estimated via CAPCOA is shown in Figure 1.

6. Estimate implementation costs and timeline for each strategy and scenario. Costs and phasing are based on a combination of existing OHSU programs costs, industry standards, and assumptions.

7. Estimate future parking demand for each user group based on existing parking demand ratios and anticipated TDM impacts.

8. Measure the revenue and expenditure impacts of both new TDM strategies and the effects of those measures on revenues/expenditures.

Core Assumptions

As with any modeling exercise where information is imperfect, a number of assumptions were made. In general, a best estimate was based on existing programs and revenues, experience with other institutions, and professional judgment. This model used the following basic assumptions:

- Increases in campus population by user group:
  - Employees: 3% baseline annual average, with anticipated growth spikes in 2018 (opening of Knight Cancer Research Building), 2019 (opening of Center for Health & Healing 2 and Rood Family Pavilion), and 2023 (opening of Hospital Tower).
  - Students: 1% annual average.
  - Patients: 4.1% annual average.

- Price elasticity of demand for parking was assumed to be -0.3 (i.e. a 10% increase in parking price reduces parking demand by approximately 3%).

- 3% annual inflation rate.

- Parking costs:
  - Construction: $70,000-$82,000 per space.
  - Operations and Maintenance: $400 per space per year (lot) and $650 per space per year (garage).
  - 30-year loan at 4.3% rate.
**Scenarios**

The model analyzed a series of scenarios calibrated around two major inputs: 1) level of TDM investment, and 2) amount of new parking construction. Figure 1 below summarizes the TDM investment scenarios and their estimated trip reduction impact. The Strategy Dashboard provides a more detailed description of the strategies by level of investment. Figure 2 summarizes the assumed parking additions and subtractions by scenario.

Key Findings

Figure 3 summarizes the overall results of the TDM model by scenario. Figure 4, Figure 5, and Figure 6 show parking supply/demand and financial projections by year from 2018 to 2027 for three of the nine modeled scenarios: 1) Baseline TDM + Planned Parking, 2) Baseline TDM + Maximum Parking, and 3) Moderate TDM + Moderate Parking (Recommended Scenario). Scenarios 1 and 2 are highlighted because they represent two potential “extremes” for how OHSU could approach its parking and TDM investments. Scenario 3 is highlighted because it was identified as the recommended option. The results of all nine scenarios are shown in Figure 3.

Key findings include:

• **Doing nothing is not an option.** If OHSU continues with a status quo TDM program and only the “planned” level of parking construction, there is an estimated deficit of almost 2,300 spaces by the end of 2027.

• **Building only parking is not an option.** Even if OHSU built the maximum amount of parking, it would still have a parking deficit by the end of 2027 given projected growth and no additional SOV reduction. In addition, OHSU would likely not be able to financially sustain this level of investment in parking construction and operations.

• **More TDM investment is needed.** No matter the parking scenario, OHSU will likely have a deficit by the end of 2027 if it does not work to reduce SOV trips and parking demand through additional TDM investment.

• **The recommended scenario is “Moderate TDM + Moderate Parking.”** This scenario appears to present the most cost-effective mix of TDM and parking investment, while ensuring that OHSU’s parking facilities are efficiently utilized to provide a “buffer” that can accommodate fluctuations in demand.

• **Maximum TDM investment is likely not cost-effective at this time.** A “maximum” level of TDM investment would potentially eliminate parking deficits, but result in cost overruns that are more substantial, while potentially resulting in inefficient use of parking facilities.

• **All scenarios run a 10-year deficit.** TDM programs and parking construction are very expensive. Given the anticipated costs, it is unlikely that revenue from parking and other existing funding sources can fully cover costs. To address the deficit, OHSU could increase the cost of parking (which would likely reduce demand and affect revenue) and identify additional new sources of revenue for the mobility program.

• **The model does not capture all of the benefits of TDM investment.** Anticipated impacts do not include wider benefits for employees, students, patients, visitors, and the community. These wider benefits include employee satisfaction and retention, overall ease of access for patients, community support for OHSU, and the opportunity costs of OHSU’s land.

While the recommended scenario runs a deficit, it also allows OHSU to potentially build new patient/research facilities instead of parking, which could more than pay for the costs of the TDM program.

What is Next for OHSU?

The TDM Plan serves as OHSU’s mobility roadmap for the next decade. It provides a general framework for action and helps staff define the specific implementation steps. The path forward for OHSU will not be linear, but flexible and fluid. The TDM Plan serves as a living document that will continue to adapt to the ever changing needs of OHSU affiliates.

This TDM Plan provides an overview of the planning process, issues and opportunities, and packages of recommendations. The complementary Strategy Dashboard provides a detailed description of each strategy, including a scoring summary, cost estimates, and supporting information.

To help prioritize the work ahead, 11 “High Impact + High Priority” strategies have been identified. By the end of 2017, OHSU is already working to implement many of these priority efforts:

- **Adopt robust policies and consistent training to increase telecommuting (Strategy PO.4):** OHSU has created a telecommuting Toolbox for departments and managers, conducted a telecommuting pilot, and has plans to further the telecommuting effort with the support of executive leadership.

- **Work with regional partners to expand transit service to OHSU (Strategy T.1):** Leveraging data from the Night Access Plan Project, OHSU worked with TriMet to get extended service hours on the list of proposed September 2018 service enhancements. This proposal includes both earlier and later on Routes 61, 64, 66, 68.

- **Implement targeted rideshare subsidy programs for employees and patients (Strategy SM.1):** OHSU has established a partnership with Lyft for an employee ride-hailing program and for non-emergency medical patient trips. This program will be fully operational in early 2018.

- **Implement dynamic, OHSU-specific carpool service (Strategy SM.2):** OHSU is finalizing a partnership with Scoop to offer dynamic ridesharing for OHSU employees. This program is expected to launch in 2018.

- **Implement an Employee Commute Platform (Strategy PC.4):** OHSU has partnered with Luum to provide OHSU employees with a commute platform. The platform is planning to go live in spring of 2018.

- **Planning for a pilot of Daily Parking (Strategy P.1) and a Daily Financial Incentive (Strategy PC.2):** OHSU staff are currently engaged in development of pilot programs for both daily pricing and a daily financial incentive. It is anticipated that a daily incentive would be made available during the Tram shutdown, while daily pricing would be tested with the opening of the Knight Cancer Research Building in 2018.

This quick and decisive set of actions demonstrate OHSU’s commitment to reducing the drive alone rate, addressing transportation and access challenges, and implementing the TDM Plan.
OHSU is already working to implement many of these priority efforts. This quick and decisive set of actions demonstrate OHSU’s commitment to implementing the TDM Plan.
