Additional readings will be made available through the Sakai learning platform.

Course Description

Many of us are tasked with managing projects although we are not official project managers. This course introduces concepts from project management, change management, and implementation science that can be applied to many types of projects in the healthcare industry.

This course develops skills and the mindset for managing projects and programs in healthcare with emphasis on

- problem definition
- stakeholder analysis and engagement
- creating and communicating a shared vision
- estimating and scheduling
- measuring progress
- managing risk
- responding to changes and ambiguity
- implementation and project closeout
