Poorly functioning work groups benefit most from a workplace safety and health intervention

Photo by Scott Blake on Unsplash

What is it about?

The safety and health leader intervention had the strongest effects among work crews that needed it most; those with poorer relationships with their supervisor and those with lower team cohesion, suggesting context matters. This is a Total Worker Health intervention that targets the supervisor and workgroups and examines effects on work-life balance.

Why is it important?

Organizational context matters. Poorly functioning work groups can benefit most from a safety and health workplace intervention.
