Oregon Clinical and Translational Research Institute

Catalyzing collaboration, innovation, and translation of biomedical advances in Oregon and beyond
Translating innovative research ideas into impact

To fulfill the great potential of research to improve human health, the scientific discoveries happening all over the world must be translated into practical tools and knowledge. That’s the essence of what we do at OCTRI (“oak tree”). Our work and our passion is to help investigators, regional partners, and members of study teams remove barriers, apply best practices, and translate biomedical advances into preventions and treatments.

OCTRI is funded by the National Institutes of Health (UL1TR002369) through the Clinical and Translational Science Awards Program, run by the National Center for Advancing Translational Science. OCTRI also has a significant institutional commitment from OHSU. We are a catalyst for scientific collaboration, innovation, and research growth by providing top-notch expertise, equipment, and facilities.

OUR MISSION
To enhance the efficiency and quality of rigorously translating research ideas into impact.

OUR IMPACT
$140M+
Follow-on funding from pilot awards

850+
Projects supported by the Clinical and Translational Research Center

1,000+
Faculty, fellows and students enrolled in the Human Investigations Program

OUR PARTNERSHIPS
To foster and support regional scientific collaboration, OCTRI established its Partner Council, working with partners from universities, health care organizations, and national laboratories to complement and extend OCTRI’s offerings.

Members of the OCTRI Partner Council leveraged their collective expertise to launch the Northwest Microbiome Network, which seeks to illuminate the role of the human microbiome in overall health and its potential for targeted therapeutic interventions.

Extending its reach and impact to the national level, OCTRI is a key partner in establishing and leading the multi-institution CTSA-program, National Center for Data to Health (CD2H). The CD2H accelerates advancements in informatics by promoting data reuse and interoperability, tool sharing, informatics fluency, and collaboration across the entire CTSA network. Invaluable support through every stage of the research process

Oregon Clinical and Translational Research Institute (OCTRI)

Since 2006, OCTRI has worked to accelerate discoveries toward better health by pursuing these strategic goals:

• Catalyze translational research
• Develop the translational workforce
• Cultivate innovation in research
• Foster and support scientific collaboration
• Enhance partnerships with communities

OCTRI Research Support Services

PROGRAMS AND SERVICES TO SUPPORT YOUR NEEDS
OCTRI provides the information, guidance, and resources that researchers need to keep their projects moving at every stage—from initial idea to publication preparation. Study teams come to OCTRI for:

• Consultation on study design and implementation with the Clinical Research Development Team.
• Expert feedback on career development grant proposals with the OCTRI Design Studio to maximize the success of early-career investigators.
• A full suite of innovative informatics tools and resources for bench-to-bedside, clinical, and health care systems research, including Epic® data through the Research Data Warehouse, REDCap for data management, and custom web applications and databases.
• Qualitative research and program evaluation support.
• Regulatory consultations.
• Help identifying and recruiting study populations, including specialized support for reaching older adults and rural communities.
• One-on-one individualized biostatistics advice sessions and training offered through the Biostatistics, Epidemiology, & Research Design (BERD) program.

The Clinical and Translational Research Center offers nursing, bionutrition, study coordination, and lab services. This includes an inpatient unit, outpatient clinic, infusion bay, phlebotomy area, metabolic kitchen, biometric measurement facilities, and core laboratory.

WHERE FUNDING BEGINS
We explain how to get funded, what’s expected of new grantees, how to find pilot award opportunities, and more. By connecting with OCTRI, researchers can get valuable feedback on proposals, get help preparing a budget, and learn about OCTRI funding opportunities.

For example, the Biomedical Innovation Program at OHSU—an accelerator for the delivery of health care technologies—funds and supports researchers with promising ideas for technical innovations. Visit our website to learn more.
A Centralized Resource for Research Guidance and Support

OCTRI Research Navigators are standing by to provide information, direction, and support for anyone who’s ready to discuss their research needs.

Who can benefit from talking to an OCTRI Research Navigator?

- Investigators looking for people conducting similar research at OHSU.
- Research staff looking for training opportunities.
- New investigators at OHSU who would like a general orientation to available research resources.
- Researchers and study coordinators in need of wayfinding within the OHSU landscape.

Training and Education to Build Research Skills

OCTRI offers a wealth of educational and training opportunities for faculty members, fellows, students, study coordinators, mentors, and mentees, including:

- OCTRI Research Forum: seminar series covering solutions to common obstacles in conducting clinical and translational research.
- OCTRI Scholars Program: supporting early-career faculty in their transition to research independence.
- Human Investigations Program: integrated research curriculum with a certificate or master’s degree option.
- KL2 Program: 2-year career development award providing research time, formal and experiential training, and multidisciplinary mentorship.
- OSLER TL1 Program: career development in clinical and translational research for trainees.
- Study Coordinator Training: in depth education through lecture, examples, and exercises on clinical research coordinator activities at OHSU.
- Entrepreneur and Innovation Education: carefully curated programs for the busy clinician, academician, and student focused on commercializing life science technologies.
- Physician-Scientist Experience: 5-month or year-out mentored research experience for medical students.
- BUILD EXITO: undergraduate research training program that supports underrepresented and disadvantaged students.

Engaging with the Community

Through our community-engaged research and partnerships, we are working to improve the health and wellness of all Oregonians. Researchers, community members, and organizations are connected and supported through the OCTRI Community Research Hub, a centralized office located in Bend, Oregon. This team, including five community research liaisons who live and work in rural communities, is guided by the principles of community engagement and works to ensure that community voices are included in research.
