The following guidelines apply to all students who enter the Program in Biomedical Sciences (PBMS) and comply with the guidelines and policies set forth by the School of Medicine Graduate Studies, and PBMS By-Laws.

Checklist

- Earn a Minimum of 135 program specific credit hours of student that include:
 - Minimum of 27 credits of dissertation research
 - Research Methods, Scientific logic and Ethics
 - Biostatistics
 - Data Rigor and Reproducibility
 - Minimum of 8 Credits in Basic Biomedical Content courses
 - Minimum of 11 credits in Communication and Professional Development to include:
 - Short Scientific Talks
 - Scientific Writing
 - Introductory Scientific Writing
 - Scientific Writing
 - Pass all milestones
 - 2 research critique papers
 - Qualifying exam
 - Submit a paper
 - Write and defend a dissertation
 - Participate in a research community or T32 sponsored journal club and seminar series each term except the last enrolled term
 - Attend 3 seminars a year outside their current research community seminar/ journal club
 - Pass a minimum of 3 credits in quantitative skills (statistics, programming, etc.)
 - Complete all activities and pass any course identified in the educational plan that is created with the research and academic mentors and approved by the dissertation advisory committee
 - Write and defend a dissertation

General Timeline

Year 1:

- Register for a minimum of 9 and maximum of 16 credits per term
- Meet with Academic Advisors at minimum of 5 times
 - 2x Fall- for onboarding, and to discuss course selections and possible rotations
 - 2x Winter- to review rotation experiences

- 1x Spring- to discuss PBMS Research Hub choice.
- Fall Term: Complete PBMS Core Course requirements
- Winter Term: Complete three laboratory rotations and attend program seminars and journal clubs what align with lab rotation.
- Spring: Choose a dissertation advisor and select a PBMS affiliated research hub for completion of Ph.D. Attend all Research Hub sponsored seminars, events, and participate in associated journal clubs.
- Summer: Give one presentation based on a rotation in the Short Scientific Talks Course

Year 2:

- Register for a minimum of 9 and maximum of 16 credits per term
- Fall term: Meet with Academic Mentor and Research Mentor to form and meet with a Dissertation Advisory Committee (DAC). At least one DAC meeting should occur before the Qualifying Exam, and an additional meeting may be scheduled as needed.
- Complete PBMS Hub required courses.
- Complete PBMS Hub elective course requirements
- Attend all PBMS sponsored seminars
- Attend all Research Hub sponsored seminars
- Complete BMSC 628 Data Rigor and Reproducibility (Fall Term)
- Complete BMSC 620 Biostatistics or comparable (Winter Term)
- Complete Scientific Writing (Spring Term)
- Pass the Qualifying Exam (Summer Term)

Year 3 and up:

- Meet with the DAC every six months to report on academic progress.
- Continue educational training and research leading to the Ph.D. dissertation
- Complete all PBMS Hub communication and professional development requirements.
- Register for and attend the chosen PBMS Hub seminar series and journal club.

Required PBMS Graduate Courses for year one

It is imperative that students discuss their academic plan with their Academic Mentor before registering for classes.

Term	Course	Completed
Fall	Faculty Auditions	_____
	BMSC 665 Scientific Logic	_____
	BMSC 664 Research Models and Methods	_____
	MGRD 650 The Practice and Ethics of Science	_____
	<i>Choose Two of Three***:</i>	

	BMSC 661 Structure & Function Of Bio Molecules	_____
	BMSC 662 Genetic Mechanisms and Bioregulation	_____

	DEPT 607: Seminar*** (variable credits)	_____
Summer	BMSC 601 Research (variable credits)	_____
	BMSC 660 Research Rotation Talks (1)	_____

*Subject to change.

**Permission required.

***See Academic Mentor

NOTES TO COURSE REQUIREMENTS

1. Students choose a journal club offered by one of the PBMS affiliated research hubs during Spring term of Year 1. You are encouraged to register for a journal club in the hub in which you plan to join.
2. Students choose a seminar series offered by one of the PBMS affiliated research hubs during Spring term of Year 1. You are encouraged to register for a seminar series in the hub in which you plan to join.

Academic Mentors

Academic mentors are a critical resource for our students. Academic Mentors contribute formally and informally to graduate student training. They advise first year students on their Fall core courses, rotation lab choices and upon transitioning into their chosen research lab. They develop an individualized educational plan in conjunction with the student and their Research Mentor. They track student progress through individual meetings with the students and review of DAC reports.

First Year Lab Rotations

All PBMS students undertake research rotations in three different laboratories during the Winter term. Students are eligible to rotate in PBMS member faculty labs only. Information used to identify labs of interest for research rotations can be obtained by attending faculty auditions in the Fall term, speaking with potential mentors, academic mentors, faculty and students, and

by viewing faculty profiles online. Rotation arrangements are made by the student directly with the mentor, but all students must comply with the following requirements when arranging rotations.

Requirements for Requesting a Research Rotation:

1. PBMS faculty status for the potential research mentor must be confirmed by the PBMS office prior to arranging a rotation. It is the student's responsibility to inquire about PBMS faculty status in advance of arranging a rotation.
2. Ideally two rotations are identified by the end of Fall term.
3. Proposed rotations must be approved in advance by the Academic Mentor and the PBMS director.
4. The PBMS Pre-Rotation form must be completed by the prospective faculty mentor. This is initiated by the student.
5. The Pre-Rotation form must be signed by the student's Academic Mentor.
6. The completed Pre-Rotation form must be submitted to PBMS in-person or via email (pbs@ohsu.edu) by the first day of the rotation.

Students are strongly encouraged to consider options for rotations in advance. Students should discuss the specifics of their rotation project with the research mentor prior to rotating. The ultimate purpose of lab rotations is for the student to identify a dissertation mentor. Rotations should be chosen carefully and be undertaken with faculty who are able to support the student during their dissertation study, and who can provide a well-defined project as the basis of the dissertation.

Students are expected to spend a minimum of three hours for every research credit hour per week in the lab. For example, if a student is registered for 8 credits of research they should spend a minimum of 24 hours per week engaged in lab activities to familiarize themselves with research projects and the laboratory environments of PBMS faculty. In consultation with rotation mentors, students are strongly encouraged to establish expectations prior to each rotation.

Each student and faculty rotation mentor will complete a written evaluation of the rotation that may be shared with student advisors, program directors, and Qualifying Exam committees. Students and their rotation mentors are required to meet to discuss the evaluation of the student's performance at the end of the rotation. Students' evaluations of mentors will be sent to the student's Academic Mentor, but held by the PBMS office for one year prior to release to mentors. This is to encourage an honest and constructive evaluation of the mentor and the rotation experience. Evaluations will be kept in the student file by the PBMS Coordinator.

Dissertation lab selection/ Hub Selection

After successful completion of three research rotations, students select a faculty member to serve as their dissertation mentor. The decision of a student to enter into a laboratory to pursue dissertation research is dependent upon a joint agreement between the faculty members, the graduate student, and is subject to approval by the PBMS Director. Conditional approval based on an agreement that there will be a co-mentor will be at the discretion of the dissertation advisor, graduate program director, and the PBMS Director. The Research Mentors must be members of both School of Medicine Graduate Faculty and PBMS faculty. Students and Research Mentors must discuss mutual expectations around mentorship per the [Policy on Mentor – Student Discussions](#).

It is the student's responsibility to secure a position with a research mentor, selected from one of the three rotations. A fourth rotation is discouraged, but under very rare situations can be allowed at the discretion of the Program Director. Once a mentor has agreed to accept a student into their lab the PI and/or their Department take over funding responsibilities and the student notifies the Program Coordinator to initiate the Mentor Assignment Form. This process should be completed by the beginning of the Summer term.

First Year Rotation Presentations

In Summer term first year students take the required Shot Scientific Talks course, BMSC 660, which provides guidance on giving short scientific talks and offers them the opportunity to present their laboratory rotation experience in a formal setting. This course provides students with a speaking opportunity among their peers and a forum in which to ask probing questions during presentations. Presentations will be ten minutes in length followed by a five minute question and answer period. Students are strongly encouraged to practice their presentations with lab mates and seek input from their rotation mentors.

PBMS/ PBMS Hub Seminars

Students are required to attend PBMS Hub Seminars from Spring Term of Year 1 onwards. PBMS also requires students to attend 3 seminars per year outside their hub. A wide variety of experts in the field visit campus throughout the year giving seminars that are open to all students. Flyers announcing visiting seminar speakers can be found posted campus-wide and member program coordinators and websites also have information about schedules for visitors. These seminars provide excellent opportunities for interaction with leading researchers and educators. Small groups of students are also invited to luncheons and dinners with visiting speakers.

PBMS Hub Journal Clubs

First year students are required to attend a PBMS Hub Journal Club beginning Spring Term of Year 1. Students are encouraged to choose a Journal Club in the Research Hub they are joining.

Yearly Retreat

Each Summer PBMS holds a yearly retreat for PBMS students and faculty. Activities during the retreat include: student poster sessions, awards presentations, workshops, guest lecturers, and social activities. Retreat attendance is required by first year students and strongly encouraged for advanced students.

Hub Specific Requirements

Hub Preferences Fall Y1

				Elective: NEUS 623-0 Neurobiology of Disease	

Dissertation Advisory Committee

DAC Formation: A DAC should be assembled and begin meeting, starting at the beginning of a student's second year (preferably in September or October). The rationale for this is to give the student advice earlier in their graduate careers concerning research, coursework, and preparing for the Ph.D. Candidacy Exams. Students should assemble their DACs, keeping in mind that the committee should be composed of four faculty members (including their mentor), and should include as diverse a faculty membership as possible, so as to get advice from a multidisciplinary committee. Specific OHSU rules for the composition of DACs are listed below.

DAC membership requires approval from the PBMS Graduate Program Director and Associate Dean of Graduate Studies, and will include:

- At least four faculty members (including the student's Research Mentor) with expertise in one or more aspects of the student's project and who are familiar with the requirements of the graduate program for completion of a PhD. Students (in consultation with their Research Mentor and Academic Mentor) may request specific faculty to serve on their DAC.
- A majority of DAC members must be members of the School of Medicine Graduate Faculty. OHSU faculty from outside the Graduate Faculty may be included.

- One member may be from outside the university, but their appointment requires approval by the Associate Dean for Graduate Studies (the Program Director should include a brief CV and short explanation of non OHSU-faculty expertise on the committee to the Associate Dean)
- No more than two DAC members may lack any DAC experience and at least one member must have been on a DAC for a graduate student.
- DAC Chair: One DAC member, not the mentor, with significant experience in mentoring graduate students, who has served on a DAC before.
- DAC members may be added or removed with the approval of the Academic Mentor, Program Director and Associate Dean of Graduate Studies. Following the change, the DAC composition will still adhere to the above requirements.

Typically, DAC members will be invited to serve as part of the student's Oral Exam Committee.

Student Responsibilities: The student must meet every six months with their Dissertation Advisory Committee. Following completion of the third year, the student may meet more frequently on the recommendation of his/her committee.

- It is the responsibility of the student to schedule and coordinate the meetings.
- The student must prepare a written report of progress, on the appropriate form, to be submitted a week before the meeting to Graduate Student Coordinator who will distribute it to committee members. Electronic submission to Graduate Student Coordinator is acceptable.
- The student is expected to present a PowerPoint presentation summarizing goals, progress, and future plans.
- The student is expected to write a summary of the meeting and the plans for future training and research, following discussion with the thesis advisor.

PBMS Qualifying Exam

Eligibility: To be eligible to take the PBMS Qualifying Examination (QE), students must have successfully completed all coursework required in the first two years of the PBMS curriculum. Students may not take the qualifying examination if they are on academic probation or if an incomplete grade remains on their transcript.

Format: The QE consists of a written and oral component and is conducted by a Qualifying Exam Committee (QEC). The candidate must pass both the written and oral portions of the examination in order to pass. The written component will resemble a NIH-style NRSA grant proposal on any topic chosen by the student, including the student's proposed dissertation research. The oral component will consist of a 20-30 minute presentation by the student on the

topic of the written proposal. Members of the student's QEC will ask the student a series of questions on the proposal and related scientific areas.

Qualifying Examination Committee involved in the administration of PBMS Qualifying Examinations (QEC - 5 members): This committee is responsible for administering a specific qualifying examination. For each student, their Academic Mentor will consult with the Research Hub Director to appoint an examination panel of five faculty members and assign one panel member to serve as chair. All panel members will be members of PBMS. Each of the five members of the QEC will participate in the examination process and vote on the outcome. The student's Research Mentor may NOT be appointed to the panel and may NOT attend the qualifying examination. The Research Mentor may NOT attend sessions when the panel privately discusses the student's performance, except at the unanimous invitation of the panel. The QEC will be responsible for evaluating the written and oral components of the examination, for determining the outcome, and for identifying any requirements that a student must complete in the case of a conditional pass. Each student will have their own QEC, though PBMS faculty may serve on multiple panels.

Role of Research Mentor and Other Faculty: To facilitate an objective examination, the student's mentor is not permitted to edit or comment on the written proposal. Neither is the mentor, nor any other faculty member, permitted to coach the student in a rehearsal of their oral presentation. The Research Mentor must provide a letter describing in specific detail the role of the advisor and of the student in the development of the hypothesis and research plan in this proposal. The dissertation advisor must confirm that they have NOT contributed to the written portion of the exam, and that the student has NOT used any of the advisor's prose within the proposal. The QEC has two weeks from receipt of the written proposal and dissertation advisor letter to request more information from the dissertation advisor if deemed necessary. The Research Mentor should not attend the QE.

Timeline and description: The following steps are required prior to completing the QE during Summer term of Year 2. Specific dates for the exam must be arranged with your Academic Mentor and academic coordinator. Extension of deadlines for any reason will only be considered by written request to the PBMS Director. Students may take the QE earlier than Summer Term, however, the student's dissertation advisor, academic mentor and the PBMS program director must approve this option.

1. Students submit a one-page, Specific Aims page to the PBMS office (pbs@ohsu.edu) and their Academic Mentor the first week of Summer term. Students should note whether or not the QE subject material is part of their current research.
2. The Academic Mentor appoints the QEC and identifies the Chair of the QEC. The student is notified of QEC.

3. The Academic Mentors will forward the Specific Aims page to the QEC. The QEC Chair obtains input from the rest of the QEC and notifies the student in writing of acceptance or of any weaknesses or specific suggestions for improvement to their proposal. This feedback is also provided to the Academic Mentor and Hub Director.
4. Program Coordinator organizes a date and room reservation for the oral examination in consultation with student and his/her QEC.
5. **At least one week prior to the Oral Exam** – Student submits a final written proposal to the QEC and their dissertation advisor.
6. **Prior to the Oral Exam** – The Research Mentor submits a letter to the QEC from their Research Mentor, describing their role during preparation of the proposal (see “Role of Research Mentor and Other Faculty” below).
7. **At least ten days before the beginning of Fall term** – Oral examinations completed.

If scheduling difficulties exist and the exam cannot be completed by the time grades are due (one week after the end of the term) the student will receive an incomplete “I” grade. Incomplete grades remaining on the student’s record after one subsequent term will convert to a no pass “NP”.

Format of Written Proposal: The proposal shall be written following current general guidelines of a NRSA application. It is the student’s responsibility to check on the guidelines, which are available on the NIH website. It shall consist of a hypothesis-driven series of experiments bearing directly on the question or hypothesis of the proposal, with a discussion of probable outcomes, interpretations and alternative approaches. The proposal shall be no longer than 7 pages, including figures and references (single-spaced; 1 page for the specific aims section and 6 additional pages for the rest of the proposal). Students may discuss topics and proposed experiments with all sources (fellow students, post-doctoral fellows, faculty, and visiting scientists), but none of them may be involved in any aspect of the student's written proposal. Students may also seek general assistance in scientific writing and proofreading. However, it must be remembered that the written proposal is an examination, and must represent the student's ideas and development of the research topic. Students are expected to adhere to established guidelines for professional ethical conduct in the preparation of their QE proposal topics.

Format of Oral Examination: The oral examination will probe the breadth of the student’s knowledge and also the depth of the student's understanding of his/her research proposal. Students are expected to begin the oral examination by giving a short (20-30 minute), formal presentation summarizing the written proposal. Audio-visual aids may be used during the summary of the proposal. During the oral examination by the panel, the use of prepared visual aids, textbooks, or other reference material is not permitted. Slides and figures from the oral

summary may be referred to if they are the subject of a question from the exam panel. Questions from the Examination Panel should focus primarily on issues pertaining to the proposal; however, the student is responsible for all areas of coursework that have been covered during the first two years of graduate study. Therefore, students also should expect questions on general knowledge in addition to questions relating to the scientific background pertinent to their areas of specialization, as well as more general issues related to the proposed experiments. Students may be asked about the choice of methodologies, their relative advantages and disadvantages, and potential alternative strategies (when appropriate). Students will be expected to understand and be ready to explain the scientific basis of technical methods they intend to employ. The student should be prepared to discuss the rationale for the proposed study, the strengths and limitations of the proposed experimental strategies, and potential pitfalls and alternatives.

Preparation for the Oral Examination: Students should be thoroughly familiar with key historical and background publications that provide the foundation for their proposal, as well as any current literature that directly pertains to their specific aims. In addition, students are encouraged to review the more general areas of cellular and molecular biology that provide the conceptual framework for their proposal. Once a student has submitted their final written proposal to their QEC, they may contact panel members for guidance in preparing their oral exam presentation.

Outcomes: The outcome will be decided by majority vote of the QEC and be recorded on the PBMS Qualifying Examination form. The form shall be signed by all voting members of the examination panel and returned promptly to the PBMS office. PBMS will inform students of the outcome immediately after the results are received. Possible outcomes include:

Pass –The student passes both the written and oral examination. In certain circumstances, the QEC may identify specific areas of weakness that the student needs to address during subsequent dissertation effort. This information will be communicated in writing to the student, dissertation advisor, and PBMS by the chair of the examination panel.

Conditional Pass – A conditional pass may be given for either the written or oral components of the examination if significant deficits are identified. In this case, the student will be provided with specific requirements that must be met within a prescribed time frame. A variety of requirements may be assigned at the discretion of the QEC to correct a perceived deficit, including (but not limited to) additional coursework; revision of some or the entire written proposal; assignment of additional directed reading; preparation of a written review of a particular topic; or presentations in journal club formats. In the case of assigned additional coursework, the student must complete the assigned course(s) with a grade of “B” or better. Within one week of the oral examination,

the Chair of the QEC will prepare a written statement to the student describing the conditions required to remove the conditional pass.

The Chair of the student's QEC will be responsible for notifying the student, the student's Research Mentor, and the PBMS office when the student has successfully completed the requirements of the conditional pass. Failure on the part of the student to complete the requirements within the prescribed time frame will be considered unsatisfactory progress, and the student may be subject to dismissal from the PBMS.

Fail – If substantial deficits are identified in either the written proposal or oral examination, the student fails the Qualifying Examination. Within one week of the examination, the chair of the Examination Panel will provide a written statement to the student, the dissertation advisor and the PBMS office, describing the deficiencies that led to failing the qualifying examination. The student may petition the QEC to take the QE (written and oral) again as outlined above within the subsequent three months. Alternatively, the student may resign from the graduate program. The QEC may elect to offer the student the option to complete a Master's Degree rather than re-taking the QE. In such a case, students will be obligated to complete and defend a thesis within 1 year.

Timeline and outcomes for re-examination: The re-examination procedure must be completed within three months of the original examination, and no later than the end of Fall term of Year 3.

Students will be assigned a “pass,” “conditional pass,” or “fail” by the same criteria as summarized above. Failure to pass the QE after two attempts will automatically result in dismissal from the graduate program.

Advancement to Candidacy: Upon successful completion of the QE, students will become eligible for recommendation for advancement to candidacy. The PBMS Director will sign the QE form indicating successful completion of all PBMS academic requirements will recommend students to the Associate Dean for graduate Studies for advancement to Ph.D. candidacy.

MD-PhD Requirements

Students coming into the PBMS Program through the MD-PhD program will be required to complete the following:

- BMSC 665 Scientific Logic
- BMSC 664 Research Models and Methods
- BMSC 650 The Practice and Ethics of Science

- One PBMS Core Course:
 - BMSC 661 Structure & Function Of Bio Molecules
 - BMSC 662 Genetic Mechanisms and Bioregulation
 - BMSC 663 Cellular Biology
- Research Hub specific electives
- MD-PhD Journal Club – for the entirety of the program
- MD-PhD Professional Development Fundamentals – Year 2 (1st term of PhD years)
- MD-PhD Longitudinal Clinical Clerkship – Years 1 and 2 of their PhD years, audited afterward, but clinical experiences are expected throughout

Academic Progress

Students training for a Ph.D. degree are expected to make progress toward the research objectives and completion of required coursework. Students are expected to take the Qualifying Examination for advancement to candidacy by the end of their 12th term of graduate study; or they will be recommended for dismissal for failure to progress academically. Academic progress will be considered by the student's Research Mentor and DAC when they meet every six months. Failure to make satisfactory academic progress can and will result in academic probation and possible dismissal from the graduate program.

GPA and Academic Probation

(For more information, see the Graduate Studies By-Laws)

The School of Medicine requires students to **maintain a grade point average of 3.0**. A student receiving a cumulative GPA below 3.0 is automatically put on academic probation. The grade of **Incomplete** is reserved for circumstances beyond control of the student (i.e. illness) preventing completion of course requirements by the end of term AND where it is possible to complete requirements within one subsequent term.

Students **failing a quarter of research** credits (i.e. receives a NP-No Pass) are immediately placed on academic probation. To return to good standing, the student must obtain a passing grade on the next term of the Research (and all subsequent terms). Failure to do so constitutes grounds for termination from the program.

A student placed on academic probation because of grades must obtain a cumulative grade point average of at least 3.0 within one academic term. A student that fails to do so may be recommended for dismissal for inadequate scholarship.

Students placed on academic probation will be required to meet with the PBMS Steering Committee to discuss their remediation plans for removing themselves from probation.

Training in the Responsible Conduct of Research

The National Institutes of Health requires continued ethics training for all trainees, fellows, participants, and scholars receiving support through any NIH training, career development, research education, and dissertation research grant ([NOT-OD-10-019](#)). To meet this requirement, all graduate students are required to complete MGRD 650 The Practice and Ethics in Science during Year 1.

Finalizing Ph.D. Requirements

OHSU awards diplomas each term, based on the completion of final paperwork and thesis binding. The following requirements must be completed within six months following the completion of the Oral Examination. However, students must complete all requirements before May 20th in order to participate in the graduation ceremonies in June of the same year.

- a) Corrections to Dissertation. If necessary, make corrections to the dissertation.
- All members of the Examination Committee who recorded a satisfactory vote for the oral examination must sign the CERTIFICATE OF APPROVAL page. Signing of the approval page indicates that all required corrections have been completed.
 - All required corrections must be completed and approved by the Examination Committee within 6 months after the oral exam. Programs may impose a stricter deadline. Graduate Studies will defer to program.
 - Failure to submit an approved dissertation within this time limit will void the oral exam and the oral examination will need to be retaken.
- b) Electronic Submission of Dissertation. The Library requires OHSU students to submit an electronic copy of their doctoral dissertation. Additionally, students are required to submit an electronic copy to the MMI graduate program coordinator for program records.
- Students should email their electronic copy in PDF format along with required forms to ethesis@ohsu.edu at least two weeks before signed forms are due in the Graduate Office.
 - The page containing your committee members' signatures should not be filled out for the copy you submit to the library.
 - Workstations in the library are set up with all necessary applications. Limited support can be arranged prior to submission.

- Review Theses, Dissertations, Capstones, & Portfolios on the [OHSU library website](#) for required forms, more detail on submission requirements and options for electronic publishing.
- The OHSU LIBRARY DOCUMENT SUBMISSION FORM & RECEIPT is required by the Graduate Studies Office. The Library will copy the Graduate Studies Office when they email their signature acknowledging receipt to you for your thesis/dissertation. In addition, you may forward the signed librarian receipt to somgrad@ohsu.edu. If you receive a hard copy receipt, please deliver the original receipt to the Graduate Studies Office. A copy of the credit card or payment receipt is not required.

c) Application for Degree. The Office of the Registrar requires that the APPLICATION FOR DEGREE form be completed and is required in the Registrar's Office one term prior to completing degree requirements. Exit contact information will be collected on the 'Application for Degree' form.

d) Survey of Earned Doctorates. The required Survey of Earned Doctorates can be found at <https://sed-ncses.org/>. Student responses are confidential, except for the postgraduate placement information (institution and job title), which may be shared with the programs.

e) After all of the preceding requirements have been completed, the Associate Dean for Graduate Studies will review all paperwork and sign the Oral Exam Certification form.

- The original form will be forwarded to the Registrar as final approval of the thesis and acceptance for graduation.

Graduation. Information regarding graduation will be posted to the Graduate Studies website at www.ohsu.edu/som/graduate

School of Medicine Commencement Ceremony. This is a special event when graduate degrees are formally conferred for those who received a degree from the School of Medicine during the prior academic year. Family and friends are encouraged to attend and no ticket is required. Degrees will not be awarded until all academic requirements have been met and the student pays all debts and discharges all other obligations he or she has to the University, including the Registrar's graduation fee.

Ethical and Professional Behavior

In compliance with federal regulation and OHSU institutional policy, all investigators, research staff, and other relevant personnel (those reasonably involved in the design and/or conduct of human, animal, applied and/or basic science research) must complete OHSU's Responsible Conduct of Research (RCR) education.

All Doctoral and Master's students are required to successfully complete at least one course in ethics and professional conduct or be exposed to equivalent content.

Refer to [Graduate Studies Policies and Guidelines](#) for more on behavior and conduct policies.

Funding

PBMS students are funded by PBMS during the first 9 months of graduate studies. At the start of Spring term, students select a faculty member to serve as their Research Mentor and join one of the PBMS hubs. Funding responsibility is transferred to the student's PI at the end of Spring term.

Financial responsibilities include:

- Tuition
- Health & Dental Insurance
- University Fees
- Annual Stipend

Should the PI lose funding, the default is as follows: 1) PI's primary administrative unit, 2) School of Medicine (SoM).

Refer to [Graduate Studies Policies and Guidelines](#) for more PhD Student Stipend Information.

Time Limit for Completing Degree Requirements

For the Ph.D. degree, 135 approved graduate credits are required. Graduate credit toward Ph.D. degree requirements shall be granted only for coursework completed during the 7 calendar years (28 terms) prior to completing all degree requirements.

Dismissal

Refer to the Academic Bylaws, which can be found on the SOM [Graduate Studies Forms and Policies](#) page.

Grievances

The procedure for handling grievances is outlined in the Academic Bylaws, which can be found on the SOM [Graduate Studies Forms and Policies](#) page.

Exceptions

In matters related to coursework, exceptions must first be approved by the Course Director and the Program Director. Other exceptions must first be approved by the Program Director

PBMS Admissions Policy

- PBMS will accept applications once a year for admissions into the graduate program. The application window will open September 1, and will close by the end of November.
- Applications will be reviewed administratively to ensure all required application materials including transcripts and letters of reference.
- The PBMS Admissions Committee will be responsible for evaluating applications using a holistic review process and will make recommendations to interview a subset of students. All members of the admissions committee must be PBS graduate faculty.
- The PBMS Admissions Committee and PBMS faculty will conduct interviews and evaluate students using a prescribed rubric. Based on this evaluation, the PBMS Admissions committee will recommend admission of students into the graduate program.

Additional Policies

PBMS follows all academic and student policies laid out in the student handbook, which include but are not limited to the following:

- Vacation sick leave policy
- Academic adjustment policy for new parents
- Continuous enrollment policy
- Mentor-Student Discussion policy
- School of Medicine technical standards

The Student Handbook will be emailed to you once a year, and can always be found on the [SOM Graduate Studies Forms and Policies](#) page.
