
How does protecting yourself keep others safe?

Getting vaccinated makes you much less likely to catch COVID-19.

If you don't catch the virus, you can't spread it. That includes to family members at high risk, or to vulnerable babies and young children.

Once enough people get vaccinated, the virus won't be able to spread as easily in our communities. Getting your shot is a critical step to keep us all safe.

Visit covidvaccine.oregon.gov for the latest information on vaccines in Oregon.
