Adverse Event Management

DATE: October 21, 2021 PRESENTED BY: Julie Mitchell & Cynthia Morris, PhD, MPH,

Agenda

- Why? Subject Safety
- Adverse Events
- Unanticipated Problems, Protocol Deviations & Reportable New Information
- Roles & Responsibilities
- How to collect data
- Where to collect data
- Common Issues
- Adjudicating
- Reporting

Why do we collect Adverse Events?

- To determine the **safety profile** of a drug or device
- To evaluate the **risks and benefits** of a product
- To provide information for the **package insert**, if approved for marketing

Protecting subject safety is a federal mandate

OREGON CLINICAL
& TRANSLATIONAL
Research Institute

Which Regs Apply?

OHRP

45 CFR 46.111

FDA

21 CFR 50, 312.32, 812, 54, 56

**ICH
GCP**

1.1, 1.2, 1.5, 3.3.8, 4.11, 5.17

HIPAA

45 CFR 160, 162, 164

**OREGON CLINICAL
& TRANSLATIONAL**
Research Institute

Principles of Subject Safety

- Risks to subjects are:
 - Minimized
 - Reasonable in relation to benefits
- Selection of subjects is equitable
- Informed consent process
- Adequate provision for monitoring safety and data
- Provisions to protect privacy/ maintain confidentiality
- Safeguards for vulnerable populations
- Often a protocol objective when testing new therapies
- Depending on treatment, may need to identify stopping rules clearly (e.g. types and frequency of SAE's)

Adverse Event

- Any untoward or undesirable, although not necessarily unexpected, event experienced by a human subject that may be a result of:
 - Interventions and interactions used in the research
 - Collection of identifiable private information in the research
 - Underlying disease, disorder, or condition of the subject ; and/or
 - Other circumstances unrelated to the research or any underlying disease, disorder, or condition of the subject
- Change in the subject's status from baseline

Adverse Event Log

ADVERSE EVENTS LOG (HAND ENTRY)										
Complete for randomized subjects										
<input type="checkbox"/> 1. No AEs to report <i>checkbox</i> Table below not displayed if box is checked Page <input type="text"/> of <input type="text"/>

SEVERITY	RELATIONSHIP TO DRUG	ACTION TAKEN	OUTCOME
1 Mild	1 Definitely related	0 None	1 Resolved
2 Moderate	2 Probably related	1 Medical Intervention	2 Recovered with minor sequelae
3 Severe	0 Unrelated	2 Hospitalization (after initial discharge)	3 Recovered with major sequelae
		3 Hospitalization prolonged	4 Ongoing/ Continuing treatment
		4 Concomitant Medication	5 Condition Worsening
		5 Concomitant Therapy	6 Death
		97 Other <i>Specify text</i>	99 Unknown

Seriousness

- Any adverse experience that results in any of the following outcomes:
 - Death
 - Life-threatening adverse event
 - Inpatient hospitalization
 - Prolongation of existing hospitalization
 - Persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions (Disability or Permanent Damage)
 - Congenital anomaly/birth defect OR
 - Based on appropriate medical judgement, may jeopardize the subject's health and may require medical or surgical intervention to prevent one of the other outcomes listed in this definition

Seriousness

- Additional information is required and CRFs should be designed to aid collection
 - Is it a common event in the population under study?
 - Was it “treatment-emergent”?
 - Did it respond to de-challenge?
 - Did it recur on re-challenge?
 - Were there concomitant medications?
 - Were pertinent labs/other tests done?
 - Was there an obvious alternative cause?
 - Is it a study endpoint?
- Collect enough relevant information on CRF to allow for good quality narratives
- Use FDA form 3500/3500A as a guide

Serious Adverse Event Form

Serious Adverse Event (SAE) Report Form	
Protocol Title: _____	
Protocol Number: _____	
Site Number: _____	
Pt_ID: _____	
1. SAE Onset Date: _____ (dd/mm/yyyy)	
2. SAE Stop Date: _____ (dd/mm/yyyy)	
3. Location of serious adverse event (e.g. at study site or elsewhere): _____	
4. Was this an unexpected adverse event? <input type="checkbox"/> Yes <input type="checkbox"/> No	
5. Brief description of participant with no personal identifiers: Sex: <input type="checkbox"/> Female <input type="checkbox"/> Male Age: _____	
6. Adverse Event Term(s): _____ _____	
7. Brief description of the nature of the serious adverse event (attach description if more space needed): lkfdssdgdasg adglm'grekm _____	
8. Category of the serious adverse event:	
<input type="checkbox"/> death – date _____ (dd/mm/yyyy) <input type="checkbox"/> life-threatening <input type="checkbox"/> hospitalization - initial or prolonged <input type="checkbox"/> disability / incapacity	<input type="checkbox"/> congenital anomaly / birth defect <input type="checkbox"/> required intervention to prevent permanent impairment <input type="checkbox"/> other: _____
Serious Adverse Event Report Form 1 of 2 Version 1.1	

Serious Adverse Event (SAE) Report Form	
9. Intervention type:	
<input type="checkbox"/> Medication or Nutritional Supplement: specify _____ <input type="checkbox"/> Device: Specify: _____ <input type="checkbox"/> Surgery: Specify: _____ <input type="checkbox"/> Behavioral/Life Style: Specify: _____	
10. Relationship of event to intervention:	
<input type="checkbox"/> Unrelated (clearly not related to the intervention) <input type="checkbox"/> Possible (may be related to intervention) <input type="checkbox"/> Definite (clearly related to intervention)	
11. Was study intervention discontinued due to event? <input type="checkbox"/> Yes <input type="checkbox"/> No	
12. What medications or other steps were taken to treat serious adverse event? _____ _____	
13. List any relevant tests, laboratory data, history, including preexisting medical conditions _____ _____	
14. Type of report:	
<input type="checkbox"/> Initial <input type="checkbox"/> Follow-up <input type="checkbox"/> Final	
Signature of Principal Investigator: _____ Date: _____ (dd/mm/yyyy)

& TRANSLATIONAL**
Research Institute

Unexpected vs. Expected

Expected toxicities from the study treatment if found in the following:

- Package Insert
- Investigator's Brochure (IB)
- Protocol and Informed Consent
- Safety profile of other drugs in the same class

Unexpected means that the event experienced by the subject is not listed:

- In the IB or is not listed at the specificity or severity that has been observed
- Not consistent with the risk information described in the general investigational Plan

Expectedness is the responsibility of the PI

OREGON CLINICAL
& TRANSLATIONAL
Research Institute

Severity

- Severity refers to the **intensity of the event** and can be used with any event, without regard to whether or not it meets the federal criteria for ‘serious’....is expressed in ‘grades’ of severity.
- Protocol & disease specific grading scales
 - NCI, cancer specific
 - CTCAE, DAIDS, Toxicity Grading Scale for Healthy Adult and Adolescent Volunteers
 - Severity scale per adverse experience term

Example: General severity scale

- Grade 1: Asymptomatic or mild symptoms; clinical or diagnostic observations only; no intervention indicated
- Grade 2: Moderate; minimal, local or noninvasive intervention indicated; limiting age-appropriate instrumental ADL
- Grade 3: Severe; or medically significant but not immediately life threatening; hospitalization or prolongation of hospitalization indicated; disabling; limiting self care ADL
- Grade 4: Life-threatening ; urgent intervention indicated.
- Grade 5: Death related to an AE

Responsibility of the PI/MD Co-I

OREGON CLINICAL
& TRANSLATIONAL
Research Institute

Causality / Relatedness

- Was there a causal relationship between the treatment (drug, device or procedure) and a reaction
- OHSU IRB causality categories:
 - Not related
 - Caused by subject's underlying condition
 - Caused by conditions unrelated to research or underlying condition
 - Possibly related
 - Related

Example:

- Definite: clearly related
- Probable: likely related
- Possible: may be related
- Unlikely: doubtfully related
- Unrelated: clearly not related

Causality is the responsibility of the PI

Coding of Adverse Events

- Process of converting investigators “verbatim documentation” terms to standardized “Preferred Terms” (PT)
- Standardization allows sorting of AEs and grouping of like events.
- PT used to calculate incidence of AE.
- Coding dictionaries are; MedDRA (Medical Dictionary for Regulatory Activities), ICD-10 or WHOART
- Coding problems may lead to missing safety signals; make sure that data entered is coded correctly

Example:

- Splitting same AE among similar PTs
 - *Hypertension, high blood pressure, etc.*
- Lumping different terms to same PT
 - *Leg edema, face edema, etc.*
- Lack of adequate term/definition
 - *Drug hypersensitivity, Metabolic syndrome, Serotonin*

Unanticipated Problem

“Any incident, experience, or outcome that meets all of the following criteria:

- **Unexpected** in terms of nature, severity, or frequency, given:
 - a) the research procedures that are described in the protocol related documents
 - b) the characteristics of the subject population being studied;
- **Related or possibly related to** a subject’s **participation** in the research; and
- Suggests that the research places subjects or others at **a greater risk of harm** (including physical, psychological, economic, or social harm) related to the research than was previously known or recognized.”

An incident does not need to result in actual harm to a subject in order for the incident to be considered a UP involving risks to subjects or others.

Protocol Deviation

- Accidental or unintentional changes to, or non-compliance with the research protocol. Deviations may result from the action of the subject, researcher, or research staff.
- Define reportable Protocol Deviations in the protocol.

Reportable New Information

- Reportable New Information (RNI):
 - New risks to subjects to subjects or others (UPs)
 - New or increased risk requiring change to Protocol/ICF
 - Serious or Continuing Noncompliance
 - Might impact the criteria for IRB approval
- Protocol deviations/noncompliance
- Reports
 - Federal audits/inspections
 - Monitoring reports documenting deficiencies
 - Findings of noncompliance
- Other
 - Subject complaints
 - Suspensions or premature terminations (for cause)
 - Subject incarcerations where not approved for prisoners
 - Medical Board or Medical Staff office actions against a study team member

Roles & Responsibilities

- Study Coordinator/
Research Assistant
- Principal Investigator*
- Data Manager/
Monitor
- PI or designee with
medical knowledge
- IRB Administrator
- Statistician*

How to Collect Information

- When did event occur?
- Provide a unifying diagnosis or break out into multiple events
- What (if any) clinical action taken?
- Duration?
- Outcome
- Reporting actions – Dates! When was site aware of the event? **
- Details, details, details

Example:

* Chest pain

Where to Collect Information

- Prior to or at Baseline (before intervention):
 - Pre-existing conditions that are significant or unresolved
 - Concomitant medications and treatments
 - Pre-scheduled surgeries/appointments
 - Physical exam
- During study conduct:
 - Medical Records
 - Laboratory reports
 - Radiology
 - Surgical reports
 - Infusion center notes
 - Subject diaries
 - Subject surveys or questionnaires
 - Accidental Injuries
 - Surgery
 - Reactions
 - Directly observed
 - Elicited or Spontaneously volunteered by subject(s) or family
 - Any original sources should be initialed or digitally marked to show review by PI
