

Science Cafe Speaker Series 2021

COVID-19 and Reproductive Health: What We Know

October 28, 2021: Alison Edelman, MD
Do COVID-19 Vaccines Affect Menstruation?

Some people have reported changes to menstruation after the COVID-19 vaccine. Dr. Edelman, who recently received funding from the NIH to determine if there is any cause for concern, will review what is known about menstruation and vaccines and provide insight into her research.

November 4, 2021: Jasper Bash, MD
Virus, Vaccine, and Virility: Exploring the Impact of COVID-19 on Men's Health and Fertility

Questions have been raised in the scientific community and popular press about the effects of COVID-19 and its vaccines on male health, sexuality, and fertility. Dr. Bash will review the current scientific insights that help answer these questions.

November 11, 2021: Nichole Marshall, MD
Vaccinating for Two: COVID-19 Vaccination during Pregnancy and Lactation

The CDC has reported that COVID-19 infection puts pregnant people at increased risk of severe complications, including maternal and fetal death. Dr. Marshall will review the state of the science regarding vaccination during pregnancy and lactation.

November 18, 2021: Bridging the Gap: Respectful Discourse in the Time of Covid

A panel discussion exploring mis-/dis-information and the role played by search engines and social media in the decisions we make related to coronavirus and other important health issues.

Marcel Curlin, MD
Daniel Streblow, PhD
Kristine Alpi, MLS, MPH, PhD

Thursdays from

October 28, 2021
to
November 18, 2021

7-8 p.m.
