2021 Annual Trauma Program Report

Highlights:

- **Patient Care:** The Trauma Service at OHSU treated 4035 patients in 2021, a 27.7% increase in volume.
- **Injury:** Motor vehicle collisions were the leading cause of injury in 2021, followed by same level falls and high mechanism falls.
- **Age:** The volume of patients over the age of 65 increased by 298 patients (30.9 percent) increase compared to 2020.
- **Army Civilian (AMCT3):** First cohort of soldiers completed their rotation and a second cohort started.
- **Trunkey Center:** Published 61 manuscripts and received $1.45 million in funding.

OHSU Trauma System Background

Oregon’s statewide trauma system is based on landmark legislation. The state Legislature passed statutory authority in 1985 as ORS 431.607 – 431.633, under the leadership of the president of the Oregon Senate, John Kitzhaber, M.D., and signed into law by Governor Victor Atiyeh. With the implementation of the trauma system in May 1988, only two Oregon hospitals, OHSU and Legacy Emanuel Medical Center, were designated as Level I trauma centers. Injured individuals in the four-county metropolitan regions identified by pre-hospital rescue personnel or emergency medical technicians as meeting the criteria for severe injury are transported to one of these Level I centers. The Oregon Trauma System continues to grow and expand services to all injured Oregonians. In 2018, the first two level 1 Pediatric Trauma Centers, Doernbecher Children’s Hospital and Randel Children’s Hospital, joined the state-wide trauma system: both are American College of Surgeons verified Level 1 Trauma Centers.

Published research comparing inter-hospital transfer practices before and after implementation showed improvement in rapid transfer of critically injured patients to Level 1 and 2 trauma centers as well as improved survival.

Map retrieved from OHA Website
2021 OHSU Trauma Center Summary

- 4035 patients were treated at OHSU for traumatic injury
- 2461 patients (60.9 percent) were brought to OHSU from the scene of injury (a slight increase from 2020); 1574 (39.1 percent) were transferred from another hospital (a slight decrease from 2020)
- Motor vehicle collisions (22.6 percent) were the most common mechanism of injury for all patients followed by same level falls (21.3 percent) and high mechanism falls (19.5 percent)
- Same level falls were the leading cause of death (24 percent)
- Penetrating trauma remained 9% of all trauma, despite an increase in total case numbers (347) in comparison to 2020 case numbers (293).
- Injured patients were predominantly male (64.3 percent), a slight decrease from the previous year
**Transforming Trauma Care**

**Trauma Statistics**

In 2021, the OHSU Trauma Program total patient volume increased by 885 patients, representing a 27.7 percent increase over the previous year.

**Figure 1. Patient volume 2019 - 2021**

![Patient Volume by Trauma System Entry 2019-2021](image)

**Figure 2. Gender distribution of patients treated by the OHSU Trauma Program**

![Gender distribution of patients treated by OHSU trauma program](image)

Within the trauma registry in 2021, four patients have declared non-binary status.
Figure 3. Patients treated by the OHSU Trauma Program: blunt versus penetrating injuries

The rate of penetrating trauma compared to previous years remained the same at 9%; however, in 2021, we did see an increase of 54 patient cases with penetrating injury over 2020.

Figure 4. Age distribution of patients treated by the OHSU Trauma Program

The majority of patients treated were between the ages of 25-64 (50.9 percent), an increase of 2 percent from the previous year followed by patients age greater than 75 (18.7 percent) a decrease of 0.2 percent.
Figure 5. Incidence by age of patients treated by the OHSU Trauma Program

Figure 6. Incidence by age and gender of patients treated by the OHSU Trauma Program
Month, day and time

Figure 7. Distribution of patients by month

Figure 8. Distribution of patients by day of week
July, September, and May were the busiest months for trauma in 2021, followed by October; with July having the largest trauma volume over the past few years. Weekends and evenings remain the busiest times for trauma patients presenting to OHSU.
Length of stay

Figure 10. Total hospital length of stay of admitted patients

In comparison to 2020, OHSU has seen an increase in total length of stay for transfer patients compared to patients admitted to OHSU from scene/ED.
Trauma Team Response

In 2018, the OHSU Trauma Program changed to a two-tiered system to evaluate injured patients. We continue to monitor over and under triage levels of all cases using the Cribari matrix. The level of activation is based on information provided by pre-hospital personnel and indicates the staff response to the trauma bay (Tables I and II). In the Portland metropolitan area, paramedics evaluate patients at the scene of injury and enter them into the trauma system if they meet established field triage criteria for serious injury. Our analyses indicate patients can be safely and efficiently treated with a limited team response, saving full trauma team activations for those truly critically injured patients.

ED = Emergency department

Trauma Team ready to receive a patient in the resuscitation room – Photo courtesy of Dr. Schreiber
Non-activated trauma patients meet registry inclusion criteria based on the Oregon Health Authority definition and do not require immediate care or resuscitation, these patients may receive a trauma consult.
Mechanism of injury

In 2021, motor vehicle collisions surpassed same-level falls as the most common mechanism of injury for the younger adults and falls are the leading cause of injury for patients age 65 and older.

Figure 12. Causes of injury for patients seen by the OHSU Trauma Program

Same level falls include slips and trips while walking, or walking on ice and snow. In 2021, there was an increase of 127 patients with a same level fall. High Mechanism falls include falls from height, ladders, an animal, and other.

Figure 13: Incidents by injury type and age group
Figure 14 Mean injury severity score (ISS) of patients admitted to OHSU Hospital

On average, patients transferred from other hospitals were slightly more injured than those admitted from the scene, consistent with 2020. In 2021, 715 patients (17.7 percent) had an ISS greater than 15. Data review overall shows a slight decrease in the mean ISS for patients indicating they were less injured overall than in previous years.
Hospital admissions via OHSU Trauma Program

In 2021, the OHSU admitted 2731 patients (67.7 percent) to OHSU (Figure 15), an increase of 509 patients, elderly patients were more likely to require hospital admission. Over 61 percent of patients were able to return home after admission (Figure 17).

The majority of patients required admission to the ward (29.9 percent) followed by the Intensive Care Unit (ICU) (28 percent), with over 27.2 percent of patients leaving from the ED. This is a change in comparison to 2020, where the majority of patients dispositioned to the ICU from ED.

Dr. Karen Brasel receiving canine assistance on TSICU rounds. Photo courtesy of Dr. Philbert Van
In 2021 we saw an increase of 194 patients age 25-44, requiring hospitalization after injury.

The majority of trauma patients (61 percent) discharge home following their hospitalization, with a skilled nursing facility and home with home health support being the other most common discharge dispositions.
Mortality

In 2021, 135 patients (3.3 percent) died: six patients died on arrival to OHSU, 10 died in the ED, and 21 in the OR.

Figure 18. Total deaths by arrival status

Figure 19. ED Disposition for Deaths in 2021
Same level falls are the leading cause of death, accounting for twenty-four percent of all deaths in 2021.
Care for patients age 65 and older

In 2021, the OHSU Trauma Team treated 1261 patients age 65 and older, an (31 percent) increase of 298 patients in comparison to 2020. Of these, 559 (44.3 percent) were transferred to OHSU from another hospital or clinic. Most of the patients were injured in falls. Of the 1261 injured patients treated at OHSU, 957 (75.9 percent) required hospital admission.

Falls represent the leading cause of injury for patients age 65 and older. Same level falls are the leading mechanism of injury at 51 percent, followed by High Mechanism Falls (falls from height, ladder falls, and other) representing 25 percent.
Army Military Civilian Trauma Training Team (AMCT³)

In 2016, the National Academy of Science, Engineering and Medicine produced a report titled “A National Trauma Care System: Integrating Military and civilian Trauma Systems to Achieve Zero Preventable Deaths After Injury”. A critical part of this national movement is the integration of active duty personnel in busy civilian trauma centers with the goal of maintaining combat readiness especially during times of low operational tempo. The majority of healthcare delivered in military medical treatment facilities is related to maintenance of health in relatively healthy warfighters and delivery of care to beneficiaries. Few facilities have active trauma programs. Therefore, during periods of low operational tempo, it is necessary for active military health providers to work in civilian trauma centers. The program is titled Army Military Civilian Trauma Training Team or AMCT³.

Five active duty Army personnel arrived at OHSU in September of 2018. This group included a general surgeon, an emergency medicine physician, a CRNA, an ICU nurse, and an ED nurse. These individuals integrated into their work areas caring for patients, side by side with OHSU employees. The program was initiated out of the Office of the Surgeon General of the Army and two programs, one on each coast were chosen to start. The other program is housed at Cooper University Hospital in New Jersey. Since that time, the OHSU program has added an OR nurse and a cardiothoracic surgeon. OHSU was chosen due its rich history of collaboration with the military and the strong presence of military career personnel. The first cohort of AMCT3 soldiers completed their rotation in June 2021 and a permanent party Forward Resuscitation Surgical Detachment has been assigned to OHSU with a start date in 2022.

Legislation to fund civilian trauma centers that house these programs, known as Mission Zero has been signed into law and is currently awaiting appropriation. The Office of the Surgeon General has now increased the footprint of the program and has AMCT3 centers in North Carolina, Tennessee, Illinois, Washington, and Wisconsin. The future plan involves developing programs to house each of the Army's 49 Forward Resuscitation Surgical Detachments.

Photo courtesy of Dr. Schreiber
Surgical Critical Care Fellowship

The Surgical Critical Care fellowship was founded over 20 years ago and remains the only fellowship committed to training trauma surgeons in Oregon. Since its inception, the fellowship has grown to accept four fellows each year. Fellows are selected during a competitive application cycle. OHSU received 157 candidate applications in 2021, accepting 4 fellows for the 2021-2022 academic year.

The fellowship is composed of a one-year training program housed at the only University-based quaternary medical center in Oregon. Fellowship rotations are designed to provide exposure to a broad range of critically injured and critically ill patients.

Fellows spend six months rotating on the Trauma Surgical Intensive Care Unit (TSICU) where they work with teams of Advanced Practice Providers, residents and attending trauma surgeons. Fellows also work closely with a multi-professional team of nurses, respiratory therapists, pharmacists, therapists, chaplains, and social workers. Fellows are responsible for leading continuity and management of critically ill patients in the TSICU. These patients include trauma patients as well as surgical services such as emergency general surgery, oncology, hepatobiliary, minimally invasive, colorectal, transplant, OB/GYN, and bariatric surgery. In addition to their clinical duties, they have well as medical student and resident education.

Fellows complete a 6-week rotation in the Portland VA Medical Center Surgical ICU. Fellows lead the management of critically ill cardiothoracic and surgical patients at PVAMC. During their remaining time, fellows have the opportunity to select electives in critical care units including pediatrics, medicine, cardiothoracic surgery, burns, and neurosurgery. Additional opportunities are available in radiology and echocardiography and more.

Administrative responsibilities include formulating and implementing new ICU policies and guidelines, choosing up-to-date and relevant articles for the weekly trauma breakfast journal club, participating in the ICU quality committee, leading ICU curriculum lectures to the residents, and presenting grand rounds during the fellowship.
Transforming Trauma Care

**Trauma Outreach Education**

The OHSU Trauma Center continued their Trauma Outreach Education Initiatives in 2021. In response to the COVID-19 pandemic, in-person education sessions transitioned to a virtual format when possible. For in-person courses a new protocol was developed and reviewed by the COVID Taskforce that outlined the gathering, distancing, and disinfecting protocols to maintain health and safety with in-person education.

**Fall Trauma Nursing Conference**
- 285 participants
- Participants from 17 states and 2 provinces
- Virtual format results in an archive of record presentations for ongoing review

**32nd Northwest States Trauma Conference**
- 460 participants, including: 56 physicians, 196 advanced practice providers, 367 registered nurses, 12 EMT/EMT-P, and 6 undefined registrations
- Participants from 26 states and 1 province
- Virtual format results in an archive of record presentations for ongoing review

**Weekly Trauma Conference**
The Trauma and Acute Care Surgery Service hosts weekly Trauma Conference. Chief residents present trauma and emergency general surgery (EGS) cases to a multidisciplinary participant group. In 2021, Trauma Conference was opened to all trauma centers across Oregon to increase state-wide engagement and education. Collaborative multi-center trauma case presentations highlight care across the continuum from rural to referring to definitive Level 1 trauma care.

**In-Situ Trauma Simulation**
Bimonthly adult and pediatric interdisciplinary in-situ simulation sessions provide opportunity to enhance communication and technical skills.

Injury Prevention

Screening, Brief Intervention, and Referral to Treatment (SBIRT) is as part of our American college of Surgeons (ACS) Verification. SBIRT screening provides early identification and treatment for those with substance use disorders and for those who are at risk for developing those disorders. At OHSU, serum ethanol level is drawn on all patients age 12 and over who have a trauma activation. An expanded urine toxicology screen is added by the Emergency Physician or Trauma Surgeon discretion for patients with injuries related to self-harm or if other toxic substances are suspected.

- On admission, each patient is asked two brief screening questions: one alcohol question and one drug question.
  - Patients with a serum ethanol level greater than zero receive further social work (SW) screening and intervention.
  - Patients with a positive screening from the questions receive further SW screening and intervention

Alcohol Screening: 35.7% of patients tested had a positive serum ethanol level

Toxicology Screening: 22.5 percent of all patients had screening for substances

- 32.4 percent of patients screened had none detected

Figure 23. Screening, Brief Intervention and Referral to Treatment
Patients discharged before SW intervention and referral receive a letter with drug and alcohol education and resources mailed to their home address.

- Inconsistent SW coverage for much of 2021 resulting in decreased compliance with Brief Intervention and Referral to Treatment
ThinkFirst Activity Report

- 9449 individuals were reached through ThinkFirst Oregon Injury Prevention Activities
- 5044 youth received presentations and safety activities
- 2556 adults with mini presentation on 1-2 safety topics
- 1171 individuals with webinars on injury prevention topics
- 306 educators were provided with injury prevention resources and/or curriculum (184 K-12 and HS educators and 122 Middles School Educators)
- 422 participants at 57 community meetings

Matter of Balance

OHSU ThinkFirst offers the Matter of Balance Coach Training courses. During these courses, coaches are trained to run the Matter of Balance program at their local facility. Matter of Balance is a nationally recognized course designed to reduce the fear of falling and increase activity levels among older adults. OHSU also offers a two-hour fall prevention seminar for those unable to commit to an eight-week course.

Portland Aerial Tram at Sunrise – Photo Courtesy of EdComm
In 2021, the OHSU trauma team evaluated 347 patients aged 14 and younger. Of these, 225 (65 percent) were transferred to OHSU from hospitals around the Pacific Northwest. Of the total pediatric trauma volume, 238 (68 percent) were admitted to Doernbecher Children’s Hospital: 64 (26 percent) to the ICU, 131 (53 percent) to the ward, and 27 (11 percent) to the OR, 0 children died as a result of their injuries.
331 (95 percent) patients entered the OHSU Doernbecher trauma system through the Emergency Department. 104 (31 percent) discharged home, 131 (67 percent) were admitted to inpatient units, and 0 (0 percent) expired in the emergency department.
The “other occurrences” category includes patients with sports-related injuries, those struck by a falling object, and those with injuries accidentally inflicted by others.

Figure 27. Mechanism of injury, patients 14 and younger

Figure 28. Types of Falls, patients 14 and younger
20 of the 129 patients who sustained injuries resulting from a high mechanism fall, fell out of windows.

Figure 30. Injury severity scores for patients 14 and younger
OHSU Doernbecher Pediatric Injury Prevention

Tom Sargent Safety Resource Center

The OHSU Doernbecher Injury Prevention Program (DCH IPP) is dedicated to reducing preventable injuries in children throughout the Pacific Northwest through outreach and education provided by the Tom Sargent Safety Resource Center (TSSC). The TSSC sells low-cost home safety supplies, sport helmets, medication and firearm lock boxes, and sleep sacks as well as:

- Providing public and professional education and training.
- Increasing access to low-cost safety supplies and resources.
- Encouraging health care providers, families and community leaders to get involved in finding ways to reduce injury.
- Supporting safety-related advocacy in the Pacific Northwest.

![Photo courtesy of Lori Moss](image)

A key part of the injury prevention program mission is partnering with other local, state and federal agencies to promote injury prevention education. Through a partnership with Cease Fire Oregon gun cable locks are available at no cost to any gun owner. The DCH IPP also partners with the OHSU Doernbecher Department of Adolescent Psychiatry to provide free medication lock boxes and firearm storage boxes to all families who are caring for a child at risk or who have attempted suicide. This service is available through the OHSU Doernbecher Emergency Department, OHSU Doernbecher inpatient units, or the Doernbecher Department of Adolescent Psychiatry clinic. The center offers low-cost helmets for biking, skiing and other sports and makes sure the helmets fit properly. Families can also purchase low-cost home safety gates, electrical outlet covers, cabinet latches/locks, window stops and guards, and toilet locks. Educational materials are available in all areas of injury prevention to help keep children safe at home and on the go are also available. The center offers the ODOT grant to low-income families that
need a car seat along with the offering the Buckle Up for Life program to provide free car seats to families in need. The distribution of these car seats requires the family to participate in installation and positioning education.

In response to the Covid-19 pandemic, the OHSU TSSC responded by providing virtual home safety assessments, infant safety education sessions, and car seat education sessions to meet the injury prevention educational needs to families. The TSSC also began to provide virtual sales with curb side pick up to ensure families were able to access and obtain the injury prevention resources during the Covid pandemic. These virtual services will continue to be a service provided by the DCH Injury Prevention Program through the TSSC. The DCH IPP has also partnered with Cribs for Kids and Kohl's to supply education and free portable cribs to any family that needs a safe place for their infant to sleep. All safe sleep and car seat educational materials are available in English, Spanish and an additional 7 languages to meet the needs of families.

Dr. Benjamin Hoffman, the Tom Sargent Safety Center medical director, fits a bicycle helmet on Alex Chen. (OHSU/Boone Speed Photography)

**ThinkFirst Oregon**

ThinkFirst is an organization dedicated to reducing brain, spinal cord and other traumatic injuries and fatalities by educating youth, parents and community members across Oregon.

ThinkFirst for Kids was developed in 1994 for grades 1 through 3. It provides information about the structure and function of the brain and spinal cord, motor vehicle and pedestrian safety, bicycling, water play, playgrounds, recreation and sport activities, as well as teaching about the dangers of weapons and conflict resolution skills.
Transforming Trauma Care

ThinkFirst for Youth was started in 2007 and includes presentations and classroom curricula for grades 4 through 8. Anatomy lessons and classroom activities help students develop a practical understanding of their bodies’ abilities, limitations and vulnerability to injuries. Exercises build communication and conflict resolution skills, increasing self-confidence and students’ ability to make safe choices when on their own or in the face of peer pressure.

Statewide Child Passenger Safety Instructor Development Grant

Coordinate staffing for Child Passenger Safety Technician trainings throughout Oregon

The OHSU Doernbecher Injury Prevention Program (DCH IPP) continues to be awarded the Statewide Child Passenger Safety (CPS) Instructor Development and Technician Training Grant in October 2020. This grant from the Oregon Department of Transportation Safety Division recognizes the Doernbecher Injury Prevention Program as the NHTSA-Oregon State Child Passenger Safety Training Coordinator. Responsibilities of this grant require the DCH IPP to provide administrative and instructional support to coordinate staffing for Child Passenger Safety Technician trainings throughout Oregon. This includes providing CPS Technician certification courses, continuing education units, certification renewal opportunities, and community education workshops to meet the training needs of all Oregon CPS Technicians. This support being provided to technicians and communities is proactive in nature; NHTSA reports misuse data as 3 out of 4 car seats are installed incorrectly, and a study conducted by OHSU Doernbecher Injury Prevention Program (Tom Sargent Safety Center (TSSC)) in 2015 reported 95% of families discharging from OHSU Mother Baby Unit had serious misuse of child safety seat at time of discharge. With the knowledge of this data, the DCH IPP acts locally and across the state to help children, one of the most vulnerable sections of our population. The DCH IPP team provides inpatient hospital education and works with partners to educate and certify technicians to strengthen community outreach thereby supporting safe travel for all of Oregon’s children.

Pediatric Critical Care & Neurotrauma Recovery Program

Combining the neurological and physical needs of the pediatric trauma patient after discharge

Children who receive trauma care in our facility may not be done healing when they leave OHSU Doernbecher (DCH) and often require trauma follow-up related to surgical interventions or medical management. Often cognitive or behavioral conditions are identified at the trauma follow-up visit and require specialized referrals for treatment to
teams better versed to treat the pediatric and adolescent mind. In 2019, the DCH Trauma Program sought out a partnership with the DCH Neurocritical Care (NCC) Team to combine the trauma clinic follow-up with an NCC visit and the Pediatric Critical Care & Neurotrauma Recovery Program (PCCNTRP) was launched.

All patients coming to DCH for trauma care are referred to the PCCNTRP while they are inpatient and are evaluated by a neurocritical care attending and a neurophysiologist to establish baseline data and guide inpatient coping. Once a patient is ready for discharge, they are scheduled into the Wednesday PCCNTRP where they will receive ongoing cognitive and behavioral evaluation, address return to school needs, and monitor for post-traumatic stress disorder, as well as having an evaluation with a pediatric trauma nurse practitioner. The goal of this venture is to reduce the number of visits required for follow up and better integrate neurocognitive care in the pediatric trauma patient. This approach has been so successful, that our adult trauma counterparts have requested similar access to the program. The PCCNTRP now sees all OHSU patient on the adult side up to the age of 21 years.
Dr. Donald D. Trunkey Center for Civilian and Combat Casualty Care

Launched in April 2020 in honor of the late emeritus OHSU chair of surgery Dr. Donald D. Trunkey, the Donald D. Trunkey Center for Civilian and Combat Casualty Care is on a mission to synergize and advance trauma research, innovation, and patient care across OHSU and the Pacific Northwest. To date, the Center, led by Martin Schreiber, M.D., has created a research consortium that spans across 18 different departments and 3 schools at OHSU, regional research hubs like the Veterans Administration and Pacific Northwest National Laboratory, and numerous industry partners.

The Trunkey Center Seminar Series has served as a centerpiece of activity and helped catalyze the Center’s growth. Each month the Seminar Series brings together around 100 researchers working across trauma-related disciplines, highlights cutting edge research in the field, and serves as a focal point for new collaborations. Speakers include basic scientists, clinicians, engineers, epidemiologists, and public health experts, many of whom were brought together for the first time by the Trunkey Center. The series has a central role to play as the Center continues to grow and amplify research in trauma by fostering interdisciplinary collaboration, increasing research funding, and accelerating bench to bedside discoveries.

Join the Trunkey Center mailing list to receive news updates and invitations to the Trunkey Center monthly seminar series.
Trunkey Center - Trauma & Acute Care Surgery Research

In 2021, the Trauma Research Laboratory received $1.46M in research funding from the Department of Defense, National Institutes of Health, foundations, and industry. The research group continues to work with the consortiums such as LITES, SIREN, and CLOTT.

The Trauma Research Laboratory continued to remain active with human subjects and animal research in 2020 despite the COVID-19 pandemic. Current active studies involving patients include:

- Brain Oxygen Optimization in Severe Traumatic Brain Injury – Phase 3 (BOOST-3)
- Implementing Best-Practice, Patient-Centered Venous Thromboembolism (VTE) Prevention in Trauma Center
- Prehospital Kcentra for Hemorrhagic Shock
- Prehospital Airway Control Trial (PACT)
- Use of Hypertonic Saline after Damage Control Laparotomy to Improve Early Primary Fascial Closure
- Allogeneic Bone Marrow-derived human Mesenchymal Stromal Cells for the Treatment of Acute Respiratory Distress Syndrome after Trauma
- Use of Whole Blood for Massive Transfusions
- Use of Virtual Reality as a Distraction Technique to Limit Opiate Use in Traumatic and Surgical Wound Dressing Management
- Strategy to Avoid Excessive Oxygen for Critically Ill Trauma Patients (SAVE-O2)
- Predictors of Low-Risk Phenotypes after Traumatic Brain Injury Incorporating Proteomic Biomarker Signatures (PROTIPS)
- Sleep Outcomes in Children with Concussion and Acute Brain Injury
- Prevalence and Match Rate of URM Candidates to General Surgery Residency at OHSU: Gender, Race and Ethnicity Implicit Bias Affecting Candidate Selection
- Blood volume, components and capillary leaks in SARS-CoV-2 and bacterial infections: A prospective, observational study
- Gamma Prime Fibrinogen as a Biomarker for Inflammatory Disease Progression

Dr. Schreiber and his team were able to resume work on both a large animal and small animal studies evaluating a novel therapy for rhabdomyolysis and freeze-dried platelet extracellular vesicles for resuscitation, respectively. They also continued with ample and data analysis on the animal studies completed in 2020.

Transforming Trauma Care

Trauma and Acute Care Surgery Faculty

Martin Schreiber, M.D., Chief of Trauma
Speaking topics: Transfusion; Resuscitation; What you need to know about DVTs; Lessons learned in the War on Terror; Modern methods of hemorrhage control; Blast injury; Novel blood products; Modulation of coagulation; Thromboelastometry and trauma

Karen Brasel, M.D., M.P.H.
Speaking topics: Post traumatic stress disorder; Ethics in trauma

Albert Chi, M.D.
Speaking topics: Targeted muscle re-innervation and advanced prosthetics

Mackenzie Cook, M.D.
Speaking topics: Long-term outcomes after injury; Curriculum development in surgical education and optimizing autonomy for trainees

Arvin Gee, M.D.
Speaking topics: Utilizing minimally invasive surgical techniques in trauma and emergency general surgery; Management of appendicitis and diverticulitis

Heather Hoops, M.D.
Speaking topics: Necrotizing soft tissue infections, Faculty development in surgical education: letters of recommendations, how to help the struggling learner, and team dynamics and leadership.

Tatiana Hoyos Gomez, M.D.
Transforming Trauma Care

Nick Jaszczak, M.D.
Speaking topics: Rural trauma team development course; General trauma

Laszlo Kiraly, M.D.
Speaking topics: Surgical nutrition; Education of medical students and residents

Darren Malinoski, M.D.
Speaking topics: General trauma; Organ donation

Mitch Sally, M.D.
Speaking topics: Inflammation and response to injury; Organ donation; Mechanical ventilation

Phil Van, M.D.
Speaking topics: Military trauma care; General trauma

David Zonies, M.D.
Speaking topics: ECMO; Military trauma care; Advanced ventilator management
Transforming Trauma Care

**Trauma Nursing Faculty**

Heather Wong, MHS, BSN, RN
Trauma Program Director

Jody Berryhill, BSN, RN
Trauma Coordinator

Lori Moss, BSN, RN, CCRN
Pediatric Trauma Program Manager
Resigned December 2021

Susan Steen, MSN, RN, CNOR
Pediatric Trauma Program Manager

**Trauma Program Administration (Adult)**

Elizabeth Herber
Trauma Program Administrative Coordinator
Conference and Education Coordinator
Transforming Trauma Care

**Trauma Advanced Practice Providers**

Kristy Aghayan  
Trauma Physician Assistant

Diana Clapp  
Trauma Nurse Practitioner

Staci Colovos  
Trauma Nurse Practitioner

Laura Dillon  
Trauma Physician Assistant

Lynn Eastes  
Trauma Nurse Practitioner

Erica Gibson  
Trauma Nurse Practitioner

Mindy Hamilton  
Trauma Nurse Practitioner
Transforming Trauma Care

Kristen Haynes  
Trauma Nurse Practitioner

Jessica Jurkovich  
Trauma Nurse Practitioner

Nicole Kirker  
Trauma Nurse Practitioner

Ryan McMahon  
Trauma Physician Assistant

Emma Schaus  
Trauma Physician Assistant

Scott Sherry  
Emergency General Surgery Physician assistant

Michelle Simons  
Trauma Nurse Practitioner

Amanda Staudt  
Trauma Nurse Practitioner
Transforming Trauma Care
