Exploring algorithmic bias and its impact on health research and clinical practice

Biostatistics, Epidemiology, and Research Design (BERD) and Informatics Programs

_____

As the use of algorithms in healthcare practice and delivery has grown, concerns about how they may perpetuate health disparities have been raised. In this **journal club style seminar**, together we will discuss what algorithmic bias is, how it arises, the impact of algorithms on peoples' health and well-being, and avenues for identifying and mitigating bias.

This seminar, which is part of the BERD Program's _Anti-racism in data and analysis_ series, is suitable for those with no prior exposure to algorithmic bias. Attendees will be expected to **read a paper and listen to part of a recorded talk in preparation** for the seminar and are welcome to share their own experiences.

Register via Compass. Note, seminar will **not** be recorded.
