

QUALITY 101

Part 4 – May 12, 2026
Susan Runyan
Runyan Health Care Quality Consulting

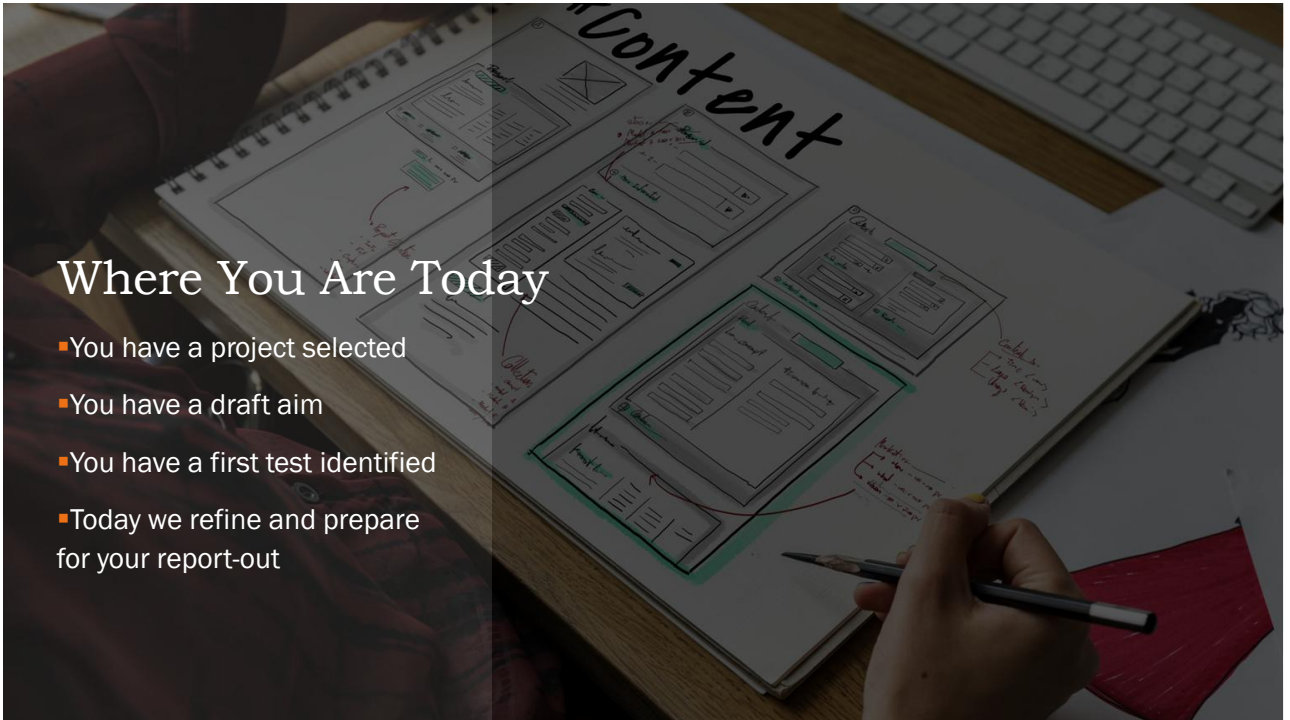

1

-  Today we move your project forward
-  You've set your aim
-  You've identified your first test
-  You've chose measurement
-  Now you will share your progress

2

Where You Are Today

- You have a project selected
- You have a draft aim
- You have a first test identified
- Today we refine and prepare for your report-out

3

Sharpen Your Aim Statement

Aim = What + For Whom +
By When + How You'll Know

- Does your aim feel clear
- Is it measurable
- Is it realistic for your clinic size
- Your aim should guide your first test – not overwhelm it

4

Who's Involved in Your First Test?

- Who is helping you run the test?
- Who needs to know it's happening?
- Who will see the data?
- Who might help remove the barriers?

5

Refine Your First Test

- Is it small enough
- Can you complete it in 1-2 weeks
- Is it visible and measurable
- It should be small enough to learn quickly

6

Clarify Your Measures

- What data will show your test worked
- How will you collect it
- How often will you look at it
- Start with simple counts or tallies – don't overcomplicate

7

Report Out

What's your project

What's your aim

What's your first test

What data will you track

What help do you need

8

Next Steps

9

Between Now and June 2

Run your next
test

Gather early
data

Share progress
with your team

Come back
to update

10

HOMEWORK

- Your aim (revised, if needed)
- Your first test (or second)
- Your early data (even if messy)
- What you learned (even if the lesson was that you need more time or data)
- What you'll test next
