Brian D. Kavanagh, MD, MPH, FASTRO

“New Lenses, New Visions for Radiotherapy in the Molecular-Genetic-Immunomodulator Era of Oncology”

Dr. Brian Kavanagh graduated summa cum laude with honors in biomedical engineering from the Tulane University School of Engineering and then remained at Tulane to receive his MD and MPH degrees from the School of Medicine and School of Public Health. He completed an internship at the Charity Hospital of Louisiana before entering a radiation oncology residency at Duke University, where he was an American Cancer Society Clinical Oncology Fellow. His first faculty appointment was at the Medical College of Virginia, and later he moved to the University of Colorado, where he is now Professor and Chair of Radiation Oncology. During his career his research interests have encompassed laboratory and translational studies of how to enhance the effectiveness of radiotherapy by modulation tumor hypoxia and inhibition of macrophage activation, and he has also focused on Stereotactic Radiosurgery and Stereotactic Body Radiation Therapy.

Friday, May 19
12 p.m. - 1 p.m.
Kohler Pavilion, KPV4153
808 S.W. Campus Drive
Portland, OR 97239
