A continuum of communication supports for Primary Progressive Aphasia

Melanie Fried Oken, Ph.D., CCC/Sp & Aimee R. Mooney, M.S. CCC/Sp

October 2013
Oregon Speech-Language-Hearing Association
Learning Outcomes

1. Identify symptoms and assessment protocols for clinical diagnosis PPA
2. Describe 3 stages of SLP treatment for individuals with PPA
3. Explain the communication support approach for intervention:
   1. Restorative
   2. Compensatory
   3. Environmental/partner training
SYMPTOMS OF PPA
What is PPA?

Definitions

• PPA is a clinical dementia syndrome caused by neurodegenerative disease
• Language function slowly declines due to neurodegenerative brain disease; eventually affecting additional cognitive, behavioral and functional domains

Characteristics

• Average age of symptom onset = mid-50’s to early 60’s (participation impact)
• Even representation of male & female
• Survival is ~ 7 years post diagnosis with highly variable prognosis
Diagnosis of PPA: Clinical Options

✓ Neurological exam: Rate of onset, other illness, other symptoms, etiology: stroke vs. tumor vs. neurodegenerative vs. other

✓ Neuropsychological exam: Evidence of language domain impairment in absence of other cog/beh deficits

✓ Speech/Language Pathology exam: Assess language modalities and components
Diagnosis of PPA: Neuroanatomy

✅ Neuroimaging: (MRI, CT, PET)
   - to rule out other diseases
   - MRI may indicate regions of atrophy (evidence of L sided atrophy?)
   - PET may show physiological dysfunction (hypometabolic activity?)
Diagnosis of PPA: Neuropathology

• The disease as seen under the microscope
• Autopsy studies show PPA is associated with a particularly underlying pathology
• Advances in imaging and biofluid biomarkers in the coming years should facilitate the diagnosis of specific pathology in PPA
• Why is this important? Information leads to more effective medication intervention
## Clinical diagnostic criteria for PPA

Mesulam, M. 2003; Gorno-Tempini et al, 2011

<table>
<thead>
<tr>
<th>Inclusion Criteria</th>
<th>Exclusion Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Language deficits emerge slowly and progress</td>
<td>1. Diseases other than neurodegenerative can account for the symptoms: stroke, tumor</td>
</tr>
<tr>
<td>2. Language deficits <strong>most prominent feature</strong> of exam</td>
<td>2. Psychiatric diagnosis accounts for symptoms</td>
</tr>
<tr>
<td>3. Aphasia is the identifiable and principal cause of impairment in ADL, otherwise WNL</td>
<td>3. Predominant initial episodic memory, visuospatial and or executive function deficits occur early in the course</td>
</tr>
<tr>
<td>4. Aphasia is sole deficit (or most prominent) at onset and for initial stages of disease</td>
<td>4. Prominent initial behavioral disturbance</td>
</tr>
</tbody>
</table>
The 3 variants of PPA

1. Nonfluent/aagrammatic variant (PPA-G)
   - Resembles a degenerative expressive aphasia

2. Semantic variant (PPA-S)
   - Resembles a degenerative receptive aphasia

3. Logopenic variant (PPA-L)
   - Resembles a degenerative conduction aphasia or mixed expressive-receptive aphasia
PPA-G: Nonfluent/Agrammatic

At least one of the following core features must be present:
✓ Agrammatism in language production
✓ Effortful halting speech with inconsistent speech sound errors and distortions (apraxia of speech)

At least 2 of 3 of the following other features must be present:
✓ Impaired comprehension of syntactically complex sentences
✓ Spared single-word comprehension
✓ Spared object knowledge
VIDEOS of PPA-G:
Both of the following core features must be present:

- Impaired confrontation naming
- Impaired single-word comprehension

At least 3 of the following other features must be present:

- Impaired object knowledge, particularly for low frequency or low familiarity items
- Surface dyslexia or dysgraphia
- Spared repetition
- Spared speech production
Videos of PPA-S
Both of the following core features must be present:

- Impaired single-word retrieval in spontaneous speech and naming
- Impaired repetition of sentences and phrases

At least 3 of the following other features must be present:

- Speech errors in spontaneous speech and naming
- Spared single word comprehension and object knowledge
- Spared motor speech
- Absence of frank agrammatism
First symptoms described by patients or observed by care providers

- *Anomia* or “trouble thinking of or remembering specific words when talking or writing” (PPA-G and PPA-S).
- Slow, hesitant speech frequently punctuated by long pauses and filler words (PPA-G).
- Marked increase in speech errors (substitutions or distortions; PPA-G).
- Struggle for speech sounds, apraxia (PPA-G).
- Difficulties understanding spoken words (PPA-S).
Progression of disease varies

- Yes/No confusion for responses
- Apraxia of Speech (PPA-G)
  - Articulatory groping with difficulty self correcting
  - Vowel distortions and inconsistent errors
  - Increased frequency of articulatory errors as word or phrase length increases
- Written language often mimics spoken language
- Mutism
ASSESSMENT PROTOCOLS
Speech/language pathology exam for PPA

1. Assess language *competence*: articulation, fluency, syntax, grammar, word retrieval, repetition, comprehension, reading & writing

2. Assess language *performance*: demands of environment to & functional communication skills needed for different settings and situations
## Speech/language pathology exam in PPA

Sapolsky, D., Domoto-Reilly, K., Negreira, A., Brickhouse, M., McGinnis, S., Dickerson, B 2011

Functional assessment tools

- Social Networks Inventory (Attainment Company)
- Aphasia Needs Assessment (Garrett & Beukelman, 2006) [http://aac.unl.edu](http://aac.unl.edu)
- CETI: Communicative Effectiveness Index (Lomas et al., 1989)
Client’s Circles:
1. Intimate partners (family)
2. Good friends
3. Acquaintances
4. Employees
5. Strangers
PRINCIPLES OF TREATMENT
Treatment themes in PPA

- Unlike chronic stroke, speech-language abilities gradually decline in PPA
- Start early & be proactive so person with PPA can learn to use communication strategies and tools as soon as possible
- Consider all modalities (stimulation and compensation)
- Environmental/partner training from the beginning and throughout
- Adjust treatment as concomitant cognitive and motor difficulties develop
Consider the goal: Functional communication

- Maximize communication at each stage of disease
- Consider the individuals in the context of their environment and their multiple conversation partners
- Tailor treatment approach to current status; plan for likely progression and educate
Ideal model: Staged treatment approach

- Assess → Treat → Assess → Treat
- Goals evolve with symptom progression
- 3 stages
  I. Restorative
  II. Shift toward aided approaches
  III. Environmental support and partner training
Other contributing factors may affect treatment outcomes

- **Changes in cognition**
  - Memory (working memory and new learning)
  - Executive functions
  - Visuospatial processing

- **Changes in behavior**
  - Social and emotional changes
  - Disinhibition, apathy

- **Motor changes**
  - Weakness, incoordination
  - Limb apraxia
  - Fine motor dyscoordination
STAGES OF TREATMENT
## Staging PPA treatment

<table>
<thead>
<tr>
<th>Stage</th>
<th>Treatment</th>
<th>Partner Involvement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>I: RESTORATIVE</strong></td>
<td>Detectable language lapses with hesitations, dysfluencies and word-finding difficulties</td>
<td>Education; behavioral strategies to support conversation. Introduction of low tech AAC.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Behavioral training: -how to ask questions -provide choices -alter verbal and physical environment to support communication</td>
</tr>
<tr>
<td><strong>II: COMPENSATORY</strong></td>
<td>Reduction in language use (circumlocutions, paraphasias, simplification, agrammatism)</td>
<td>Stage 1 + additionallow tech AAC. Transition to additional tools and techniques for multi-modal communication system, (mobile devices and SGD)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Device training: Partners learn message selection techniques and operations of each AAC tool.</td>
</tr>
<tr>
<td><strong>III: ENVIRONMENTAL</strong></td>
<td>No functional language</td>
<td>Environmental Support</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Co-construction training: Partners lead successful interaction; support participation with multi-modal techniques.</td>
</tr>
</tbody>
</table>
STAGE I: RESTORATIVE COMPENSATORY ENVIRONMENTAL
Naming treatment in Stage I PPA:

- Semantic feature cuing (category, function, location, associations, etc)
- Phonetic cuing
- Substitution (synonym or antonym)
- Circumlocution; description
- Picture sorting

Encourage self-cuing (Henry, ML, Rising, K., DeMarco, AT, Miller, BL, Gorno-Tempini, & Beeson, PM. 2013)
STAGE II: RESTORATIVE COMPENSATORY ENVIRONMENTAL
Stage II: A shift toward aided approaches

Fried-Oken, Beukelman & Hux (2012)

• Expressive language is less efficient
• Verbal participation in all activities decreases
• Telephone use decreases or is avoided
• Conversations become imbalanced
Communication Supports

Unaided Approaches (Natural modes)

• Speech
• Vocalization
• Gestures
• Eye gaze
• Body language
• Sign language
• Partner co-construction

Aided Approaches (Low tech and high tech tools)

• Paper and pencil
• Communication books
• Communication boards and cards
• Speaking computers
• Talking typewriters
• Speech generating devices
• Mobile technologies
Consider communication demands

- Different settings
  - Employment
  - Homes
  - Groups
  - Community events
- Different partners
- Topics
  - Familiar vs. unfamiliar
- Modes of communication
  - Telephone
  - Face to face, spontaneous
  - Written
  - Electronic
Low tech options

- Communication books
- Communication passports
- Photo albums
- Pictures
- Newspapers
- Communication boards
- Cards
- Remnants
- Written choice and continuum lines
- Paper and pencil
High tech options

• Dedicated speech generating devices
• Mobile technology devices
User features to consider

- Previous experience with technology
- Support for training
- Partner’s experience with technology
- Working memory abilities
- Vision and hearing abilities; fine motor
- Cognitive strategies and skills
- Motivation
  - “I bought this for mom to use.”
  - “She can’t seem to find the correct page.”
The research challenge

There is little empirical evidence that AAC helps people with PPA-G with their daily expression. We only have case studies and clinical descriptions.
Our research purpose

To provide evidence that low tech AAC (communication boards) and high tech AAC (mobile technology and apps) support adults with PPA during conversations.

To demonstrate that AAC supports lexical access so that individuals can participate in daily activities as language skills decline.
Four studies

• **Study 1:** Do personalized low tech AAC boards in *controlled conversations with research assistants* improve expressive communication?

• **Study 2:** Do personalized, daily activities AAC boards used in *conversations with frequent partner (spouse, child, caregiver)* improve daily communication?

• **Study 3:** Is there generalization and maintenance of AAC over 6 months?

• **Study 4:** Does use of mobile technology for language support improve conversation in people with PPA?
Low tech AAC study (Fried-Oken & Rowland, submitted)

Method
- 20 individuals with PPA
- 10 neurotypical adults and 20 individuals with AD
- Personalized communication boards
- Trained in board use with RA and with spouse
- Scripted and natural conversations; 6 with and 6 without AAC

PPA Results
- Targeted words produced at initial prompt significantly greater with AAC
- Number of questions posed by RA or spouses to elicit target words significantly reduced with AAC

Terry Porter
Oregon Ducks
Interpretation of results

• Low tech AAC provides meaningful lexical support during structured conversations for people with PPA.

• Low tech AAC significantly reduces lexical scaffolding provided by the conversation partner.

• This approach should be part of a PPA treatment protocol.
Current mobile technology for PPA study: Sharing new information with/without AAC

**Method**

- **Justification:** “I can understand what he is saying when I start the conversation. But when Jim comes up to me and wants to tell me something, and I don’t know the topic, I have no idea what he is talking about!”
- 4 adults with PPA (2 mild; 2 severe)
- Completed 3 activities with RA
- RAs populated 5 different layouts in GoTalk Now app with photos & speech
- Barrier task: Tell your spouse what you did this afternoon
- 3 conversations *with no* AAC support; 3 conversations *with* AAC

**Results**

- Significantly greater report of gist with AAC than with no support
- For subjects with severe PPA: Total words spoken with AAC increased significantly compared to speech only condition;
- Specific app layout did not affect language performance
Visual Scene in GoTalk Now app
3 videos: (1) speech + gestures
(2) speech + gestures + writing
(3) speech + gestures + writing + GoTalk Now app
STAGE III: RESTORATIVE COMPENSATORY ENVIRONMENTAL
Stage III: Emphasis on environmental modifications

- Engineering the environment
- Communication partner training
Natural environmental supports

• Pointing to weather pictures in newspaper to indicate time of day
• Pointing to framed boards on the family picture wall *at eye level*
• Using mail received from the bank to indicate questions about finances
• Flipping through pictures in photo book during a family visit
• Placing cue cards throughout environment
• Remnant boxes
Partner training

• “Should I finish his sentences? Give him the words?”
• Support all forms of communication
• Count to 10 in your head before expecting a response
• Speak in a quiet environment, establish eye contact and reduce distractions
• Set up a way to “come back to that later.”
Guidelines for Communicating with People who have Communication Difficulties

Remain Calm and Positive
- Smile and remain interested even when conversation strays.
- Keep a level head, a calm voice, remain as relaxed as possible.
- Focus on what the person can do, not what they can’t do.
- Look for opportunities to support interaction.

Support All Forms of Communication
- Encourage and validate the use of any communication techniques.
- Use pictures or other aids to help with word finding difficulties.
- Encourage pointing and other gestures.
- Encourage facial expressions.
- Encourage writing and drawing.

Keep it Simple
- Speak in short, concrete sentences.
- Rephrase to keep topic focused when person is confused.
- Respond immediately to communication attempts.
- Provide clear choices between no more than two possibilities.

Reduce Frustration
- Request more information on a topic if unclear.
- Avoid quizzing just to get the “right” answer.
- Do not directly contradict the person even if they are wrong.
- Draw focus away from frustrating or embarrassing problems.

Be Polite
- Make sure the person is willing to have a conversation.
- Maintain eye contact (if culturally appropriate).
- Reassure and support the person if stuck or frustrated.
- Thank the person for having a conversation.

Be Aware and Informed
- Monitor changing needs for communication support.
- Practice using all communication strategies yourself.
- Role play with friends, family and therapists to understand how to handle communication breakdowns.
Helpful Hints for Conversation

Use the examples below to help you think about how to begin a conversation, keep a conversation going, redirect the conversation, or to expand the conversation beyond one topic:

Request Details
- Can you give me a specific example?
- How did that happen?
- Why did you go?
- What were the names of the other people?

Request More Information to Expand the Conversation
- Is there anything else you can think of?
- Tell me more about...
- Had you done similar things?

Ask About Time/Sequence
- When did it happen?
- What day of the week was it?
- Was it dark or light?
- What time of year did it happen?
- How long did it last?
- What happened next?

Ask About Place
- Where did it happen?
- Were you inside or outside?
- What room were you in?
- Where were you sitting?
- What sorts of things were around you?
- Did you stay there or go somewhere else?

Ask About Context
- Who else was there?
- What were you wearing?
- What color was it?
- Who did you travel with?
- What did you eat?
- How did the flowers smell?
- Had you ever been there before?

Acknowledge Any Response
- Yeah, I like it there too.
- You’re right, she is a wonderful friend.
- I remember doing that, and then we...
- That was a long time ago, but what I’m really asking is...
- I’d love to talk more about that.

Webinar Series for PPA:  
http://www.brain.northwestern.edu/about/events/webinar.html

Dr. Lawrence Albert Memorial Webinar Series for SLPs treating Primary Progressive Aphasia

The Northwestern CNADC partnered with the National Aphasia Association and the Association for Frontotemporal Degeneration to develop a series of webinars for Speech and Language Pathologists (SLPs) who treat people with primary progressive aphasia (PPA). This collaboration was formed to improve understanding and treatment approaches for SLPs who have had limited experience with PPA in their training or career. The live events were held in the 2013 Spring/Summer.

The archived webinars are available on demand and are complimentary to SLPs, other professionals and families who wish to learn more about primary progressive aphasia and speech therapy.
"The ABCs of PPA for SLPs: Clinical Attributes, Biology and Care of Primary Progressive Aphasia". Presented by Sandra Weintraub, PhD, of the Northwestern CNADC. To view an archived recording of this presentation, please click here. For a PDF version of the slides, please click here.

"Treatment for Persons with PPA: An Adaptable Communication Support Approach". Presented by Melanie Fried-Oken, PhD, CCC-SLP of Oregon Health and Science University and Maya Henry, PhD, CCC-SLP of University of California San Francisco. To view an archived recording of this presentation, please click here. For a PDF version of the slides, please click here.

"Living with Primary Progressive Aphasia: Challenges Experienced by PPA Patients and Families and How SLPs Can Help!" Presented by Darby Morhardt, MSW, LCSW of the Northwestern CNADC and Jamie Reilly, PhD, CCC-SLP of University of Florida. To view an archived recording of this presentation, please click here. For a PDF version of the slides, please click here.
