The OHSU Evaluation Core is comprised of OHSU faculty and staff, and is designed to assist OHSU researchers and community organizations with planning and implementing effective program evaluation.

We work in partnership with researchers, organization staff, and intervention participants to measure and communicate program efficacy, balancing the need to use evidence-based approaches to meet rigorous evaluation standards with methods of dissemination tailored to reach specific audiences.

We can provide leadership and guidance through every step of your project evaluation, and are able to play a large or smaller role in your process. Services range from developing logic models to identifying outcome metrics to serving as your lead evaluators in a multi-year research endeavor.

Our work focuses on wellness initiatives across the fields of health, education, and human services. We have expertise in both qualitative and quantitative methods and specialize in community-based participatory approaches.

Our work stems from our dedication to connecting academic research to the community it serves. Situated in a leading academic health center, we are able to draw from multiple resources including advanced statistical expertise, database development, and comprehensive access to relevant literature. As a subsidiary of the Oregon Clinical and Translational Research Institute, we are committed to professional development, capacity building, and scholarship in the science of program evaluation, as well as the clear dissemination of results so they can be used by a variety of audiences.
